PROSLOV

Tijekom 2025. godine provedeno je 55. redovno godišnje brojenje prometa na hrvatskim cestama.

Brojenje ili snimanje cestovnog prometa i analiza prometnih tokova znanstvene su metode koje predstavljaju osnovu za optimizaciju planiranja zahvata na cestovnoj mreži.

Rezultati sustavnog provođenja brojenja prometa s analizom prikupljenih podataka daju uvid u prometne promjene te upućuju na potrebe rekonstrukcije, izgradnje novih pravaca ili neke druge mjere poboljšanja prometne mreže.

Podatci dobiveni brojenjem prometa imaju iznimno velik značaj za djelatnost upravljanja, građenja i održavanja cesta. Isto tako, ti rezultati su jedan od oblika kvantifikacije promjena koje se zbivaju u društvu i gospodarstvu.

U Republici Hrvatskoj javne ceste razvrstane su u četiri skupine: autoceste, državne ceste, županijske ceste i lokalne ceste. Uredbom o mjerilima za razvrstavanje javnih cesta, koju je donijela Vlada Republike Hrvatske, kao jedno od osnovnih mjerila za razvrstavanje javnih cesta određeno je prometno značenje ceste, što obuhvaća vrstu, veličinu i strukturu prometa. Takvu informaciju o cestovnom prometu ne bi bilo moguće dobiti bez dosljednog istraživanja i sustavnog brojenja prometa.

Publikacija o brojenju prometa za 2025. godinu sadrži podatke s ukupno 940 brojačkih mjesta, najviše od kada se broji promet. Brojenje je i protekle godine obuhvatilo mrežu državnih cesta, županijske ceste i manji broj lokalnih cesta, a dodatno su se prikupljali i obradili podatci s autocesta, prometnih građevina s naplatom uporabe te domaćih pomorskih trajektnih linija. Trajanje i opseg ovog projekta predstavljaju rijedak uspjeh i u međunarodnim okvirima.

Dobiveni rezultati brojenja prometa za 2025. godinu ukazuju na povećanje prometa mjerenog ostvarenim vozilo-kilometrima od 1,8 % na državnim cestama, i od čak 4,9 % na autocestama. Povećanje prometa na ukupnom usporedivom dijelu mreže državnih cesta i autocesta, na razini čitave 2025. godine, iznosi 3,9 % u odnosu na 2024. godinu. Povećanje prometa u ljetnim mjesecima (tijekom srpnja i kolovoza) iznosi 1,5 %. Ove kvantifikacije potvrđuju dugotrajan trend rasta količine prometa i gospodarskih aktivnosti.

Podatci o značajkama prometnih tokova daju kvantitativni temelj prostorno-prometnim i prometno-tehničkim studijama, studijama opravdanosti i drugim dokumentima koji su podloga za planiranje radova na izgradnji, rekonstrukcijama i održavanju cesta, kao i za financijsko planiranje.

Publikacija u svojih osam poglavlja ne obuhvaća samo podatke o količini prometa i značajkama prometnih tokova, već i ostale specifične podatke poput onih o cestama, o registriranim motornim vozilima, prometnim nesrećama, a sve kako bi se korisnicima pružila što cjelovitija slika o cestovnom prometu u Republici Hrvatskoj. Osim toga, u tekstualnom dijelu nalazi se kratki pregled povijesnog razvoja sustava brojenja prometa i prikaz korištenih brojačkih tehnologija, kao i važnije osobitosti prikupljanja i obrade podataka te predočavanja rezultata.

Dio prikupljenih podataka koji nisu u publikaciji sustavno se tijekom godine dostavljaju Državnom zavodu za statistiku i drugim korisnicima. Ti su podatci posebno obrađeni i prilagođeni potrebama korisnika.

Sustav brojenja prometa na hrvatskim cestama osnovni je izvor podataka i za međunarodne korisnike (Eurostat, OECD, ITF, UN), za koje se pripremaju i druga izvješća o cestovnoj infrastrukturi i prometu.

Ovom publikacijom uspješno je ostvaren cilj da se stručnim institucijama i ostalim korisnicima omogući na objektivnim i pouzdanim podatcima utemeljeno donošenje odluka o budućem prometnom razvoju Hrvatske i učinkovitom gospodarenju cestovnom mrežom.

UVOD 1

1. UVOD

Brojenje prometa na hrvatskim cestama od uvođenja slijedi tehnološki napredak načina brojenja u europskim okvirima te metodološke temelje vrsnosti i pouzdanosti brojačkih rezultata uzimajući u obzir promjene hrvatske cestovne mreže.

Ova publikacija prikazuje obrađene podatke prikupljene prije svega na hrvatskim javnim cestama koje Zakon o cestama (NN 84/2011) definira i razvrstava u četiri skupine: autoceste, državne ceste, županijske ceste i lokalne ceste. Podjela cesta prema kriteriju prometnog opterećenja također je jedan od najvažnijih načina podjele cesta koji za cilj ima nepristranu valorizaciju temeljenu na stručnim i znanstvenim analizama kvantificiranog prometa.

Kratkoročne i dugoročne aktivnosti usmjerene na razvijanje i unaprjeđenje cestovnog prometa te djelotvorno planiranje cestovne mreže zahtijevaju iscrpne baze podataka koje, uz one o stanovništvu i gospodarstvu, obuhvaćaju i bazu podataka o prometnom sustavu i tokovima.

U najvažnije pokazatelje stupnja pa i čimbenika razvoja neke države bez sumnje pripada izgrađenost cjeline prometne infrastrukture. U cestovnom prometu ta infrastruktura obuhvaća cestovnu mrežu sastavljenu od cesta svih vrsta, uključujući ulice te druge cestovne građevine.

U 2025. godini brojenje prometa, kao i prethodna brojenja, metodološki i tehnološki temelji se na automatskim brojilima prometa, a u brojenju prometa na prometnim građevinama s naplatom uporabe oslanja se na podatke naplatnih postaja. Racionalnost prikupljanja i kvaliteta prikupljanih podataka i njihove obrade unaprjeđuju se stalnim inovacijama, čuvajući pritom usporedivost podataka s onima iz prethodnih godina.

Sustavno prikupljanje podataka o značajkama cestovnog prometa na što većem dijelu cestovne mreže osnovni je cilj brojenja cestovnog prometa. Projekt prikupljanja, obrade i prezentacije ogromne količine prometnih podataka u nas uspješno usmjeravaju i koordiniraju "Hrvatske ceste d.o.o.".

Važan doprinos ostvarenju učinkovitog gospodarenja hrvatskim prometom i cestovnom infrastrukturom svojim podatcima i analizama daje i publikacija “Brojenje prometa na cestama Republike Hrvatske godine 2025.”. Metodološki i sadržajno ona je konzistentan nastavak prethodnih publikacija brojenja prometa, pružajući korisnicima odabrane rezultate obrade i analize podataka prikupljenih na hrvatskim cestama u pedeset i petoj godini sustavnog brojenja prometa u Hrvatskoj. Zahvaljujući dugoj povijesti publikacija o brojenju prometa uspješno je dokumentirana dugoročna opravdanost razvitka hrvatskog prometnog sustava. Već krajem šezdesetih godina 20. stoljeća počinju pripremne aktivnosti ovog dugogodišnjeg projekta, a prvi podatci prikupljeni su 1971. godine. Prepoznajući važnost podataka dobivenih brojenjem prometa kao temelja prometnog prognoziranja, planiranja, projektiranja i gospodarenja prometnim sustavom i cestama, Hrvatske ceste u sustav brojenja prometa ulažu znatna materijalna sredstva.

Planovi brojenja prometa u novijem razdoblju pretežito, uz autoceste, obuhvaćaju državne ceste, a sve češće i županijske i lokalne ceste, odnosno njihove izabrane odsječke, o čemu svjedoči i ovogodišnja publikacija.

Vrsnom funkcioniranju sustava brojenja prometa nužnu potporu daju i istraživački projekti koji predviđaju buduće potrebe i rješavaju pojedine probleme unutar toga sustava, ostvarujući tako njegov tehnološki razvitak. Valja istaknuti izradu metodologije motrenja brzina vozila u slobodnom toku na državnim cestama te primjenu te metodologije i izradu redovnih godišnjih izvješća o brzinskim pokazateljima za izabrana motriteljska mjesta od 2014. godine nadalje.

2015. godine započet je, a tijekom 2016. godine uspješno završen projekt instaliranja 165 automatskih brojila prometa na županijskim i lokalnim cestama.

Obrađeni podatci s tih brojila sadržani su u ovoj publikaciji, čime je nastavljeno započeto stjecanje spoznaja o značajkama prometa na tom dijelu hrvatske cestovne mreže.

Osnovu brojenja prometa čine automatska brojila prometa QLD-6CX nano i automatska brojila prometa za povremeno brojenje Nu-Metrics čime je uspostavljeno i tehnološko jedinstvo sustava automatskog brojenja prometa.

Brojenje prometa prilagođava se promjenama mreže državnih, županijskih i lokalnih cesta, autocesta i cestovnih građevina s naplatom uporabe te slijedi promjene u području brojačkih tehnologija i uređaja. Određene promjene kontinuirano se pojavljuju i u informacijskom i statističko-analitičkom dijelu sustava.

U sklopu projekta brojenja prometa izrađuje se posebno izvješće o brzinskim pokazateljima vozila u slobodnom toku na državnim cestama i to na više od 300 lokacija.

Publikacija brojenja prometa za 2025. godinu, slijedeći prethodne publikacije, sadrži rezultate brojenja prometa na državnim cestama, na autocestama i cestovnim građevinama s naplatom uporabe te na skupini izabranih odsječaka županijskih i lokalnih cesta, kao i podatke o prijevozu cestovnih vozila na domaćim pomorskim trajektnim linijama kako bi se udovoljilo potrebi za poznavanjem prometa na mjestima susreta pomorskoga trajektnog prometa i cestovnoga prometa.

U godini 2025. publicirani rezultati brojenja prometa predočeni su standardiziranim tabličnim i grafičkim prikazima. Usto, u publikaciji su sažeto prikazane i osnovne značajke sustava prikupljanja, obrade i predočavanja podataka.

Sadržaj publikacije podijeljen je na osam poglavlja. Nakon ovog uvodnog poglavlja, u sljedećem je sažeto opisan sustav brojenja prometa na cestama Republike Hrvatske. To poglavlje najprije iznosi povijesni osvrt na brojenje, posebice važan onim korisnicima koji žele koristiti višegodišnje vremenske serije podataka, a zatim i osnovne značajke sustava brojenja prometa i metodologije prikupljanja, obrade i predočavanja podataka za sve načine brojenja. Tu su i izabrani podatci o cestama i autocestama, registriranim motornim vozilima te cestovnim prometnim nesrećama i njihovim posljedicama. Poglavlje završava uopćenom analizom rezultata brojenja prometa za 2025. godinu.

U trećem poglavlju, pod nazivom "PGDP i PLDP s općim podatcima o brojačkim mjestima i odsječcima", u nizu tablica predočene su temeljne informacije o prometu brojačkih mjesta državnih, županijskih i lokanih cesta, autocesta i cestovnih građevina s naplatom prolaska vozila. U četvrtom i petom poglavlju nalaze se detaljniji podatci o PGDP-u i PLDP-u u tabličnim prikazima prilagođenim različitim tehnologijama prikupljanja prometnih podataka.

Podatci o prometu na cestama upotpunjeni su podatcima o prijevozu motornih vozila na domaćim pomorskim trajektnim linijama, koji su sadržani u šestom poglavlju. U sedmom se poglavlju nalaze grafički prikazi odabranih detaljnih podataka o prometu na mjestima neprekidnog automatskog brojenja prometa.

Osmo poglavlje, pod naslovom "Prilozi", sadrži objašnjenja korištenih kratica (s prijevodom na engleski jezik) i recentni zemljovid razvrstanih javnih cesta Republike Hrvatske s razmještajem mjesta brojenja prometa. Intenzitet prometa na odabranim cestovnim pravcima prikazan je, zbog opsega podataka i radi bolje preglednosti, na tri zasebna zemljovida intenziteta prometa na odabranim cestama.

SUSTAV BROJENJA PROMETA NA CESTAMA REPUBLIKE HRVATSKE

2

2. SUSTAV BROJENJA PROMETA NA CESTAMA REPUBLIKE HRVATSKE

2.1. POVIJESNI OSVRT

Brojenje prometa cestovnih motornih vozila u Hrvatskoj je počelo pedesetih godina prošlog stoljeća, kada su obavljana kratkotrajna povremena brojenja prometa, uglavnom na cestama u gradovima, a do uvođenja redovnog sustavnog brojenja prometa proteklo je još dvadesetak godina.

Temeljni je zadatak brojenja prometa na cestama utvrđivanje broja i vrsta vozila na izabranim poprečnim presjecima cesta (brojačkim mjestima) u određenim vremenskim razdobljima. Obrada brojačkih podataka, kao dva osnovna i najčešće korištena pokazatelja veličine prometa, daje prosječan godišnji dnevni promet (PGDP) i prosječan ljetni dnevni promet (PLDP). Brojenjem se može ustanoviti i niz drugih značajki cestovnog prometa, koje se po provedenim obradama podataka predstavljaju različitim pokazateljima, numerički i grafički.

Prva publikacija rezultata brojenja prometa na hrvatskim cestama, s podatcima za 1971. godinu (*Institut za saobraćaj, pomorstvo i veze: Brojenje prometa na cestama S.R. Hrvatske – Podaci za 1971. godinu*), objavljena je u Zagrebu 1972. godine.

Među načinima brojenja prometa, najstarije je i tehnološki najjednostavnije ručno brojenje prometa. U njemu osoba prolazak vozila određenim presjekom prometnice, odnosno brojačkim mjestom bilježi u formular po smjeru kretanja, vrsti i vremenu prolaska vozila. Prvo takvo brojenje obavljeno je na 201 brojačkom mjestu. Metodološki je ono bilo utemeljeno na preporuci Odbora za unutarnji promet UNECE, Ekonomske komisije za Europu organizacije UN. Prema tadašnjoj preporuci, ručno brojenje se obavljalo u zadanih 14 dana kalendarske godine, a PGDP i PLDP proračunavani su predviđenim formulama. Ručnu obradu podataka ručnog brojenja prometa 1973. godine zamijenila je računalna. Smanjen je broj dana ručnog brojenja prometa i time smanjen trošak brojenja. Zahvaljujući novim pratećim formulama za procjenu PGDP-a i PLDP-a zadržana je potrebna točnost podataka. Godine 1999. ručno je brojenje prometa napušteno.

Do godine 1992. u ručnom brojenju prometa *ljetno* razdoblje obuhvaćalo je šest mjeseci, od travnja do rujna, a od 1993. godine samo mjesece srpanj i kolovoz, kao što je to cijelo vrijeme bilo u neprekidnom automatskom brojenju prometa i brojenju prometa na autocestama i cestovnim građevinama s naplatom uporabe.

S puštanjem u promet autoceste Zagreb – Karlovac (krajem 1972.), s plaćanjem cestarine, počelo je naplatno brojenje na toj cesti u 1973. godini. To se brojenje oslanja na podatke naplatnih sustava, a od drugih načina brojenja prometa razlikuje se i po posebnim skupinama vozila.

Godine 1978. u Hrvatskoj je instalirano prvih ukupno 58 stacionarnih automatskih brojila prometa. Namijenjena neprekidnom brojenju prometa, brojila *SBH/DL 2000* njemačke tvrtke *Signalbau-Huber*, za senzor su koristila aktivne elektromagnetske indukcijske petlje položene u gornji sloj kolnika, a vozila su registrirala u ekvivalentnim jedinicama osobnih automobila. Godine 1997. ta su brojila prepravljena tako da motorno vozilo bilo koje vrste registriraju kao jedno motorno vozilo. Brojilo je podatke pohranjivalo na magnetne kazete, što je zahtijevalo njihovu mjesečnu izmjenu. S tih su kazeta podatci putem konverterskog uređaja prebacivani na drugu vrstu magnetnih vrpci, pogodnih za uporabu na *mainframe* računalu. Ta su brojila iz uporabe isključena 2005. godine.

Brojenje vozila prevezenih domaćim pomorskim trajektnim linijama uvedeno je 1980. godine. Podatci o toj vrsti prometa preuzimaju se od brodarskih tvrtki.

Prvo prenosivo automatsko brojilo prometa (američke tvrtke *Nu-Metrics*, model *NC-90A*), namijenjeno povremenom automatskom brojenju prometa, u Hrvatsku stiže godine 1997. Ta brojila razvrstavaju vozila u duljinske razrede, mogu mjeriti i registrirati brzine vozila te temperaturu i stanje

kolnika (suh i mokar) i u pravilu se koriste za sedmodnevna razdoblja brojenja. Godine 1998., na osnovi *PROMETIS-ove* studije *Uspostava novog sustava brojenja prometa u Republici Hrvatskoj*, započela je zamjena ručnog povremenim automatskim brojenjem prometa, koja je završena već sljedeće godine.

Racionalno korištenje prenosivih brojila na osnovi reprezentativnih vremenskih uzoraka i verificiranih proračuna preduvjet je dobivanja kvalitetnih, statistički utemeljenih procjena PGDP-a i PLDP-a. Na brojačkim mjestima povremenog automatskog brojenja prometa koja su obuhvaćena planom brojenja za tekuću godinu, brojenje se izvodi tijekom jednog izvanljetnog i jednog ljetnog tjedna. Većina prijenosnih brojila koja su sada u upotrebi su novijih tipova NC200, NC300 i NC350. Kako je količina prijenosnih automatskih brojila prometa ograničena, pokrivenost cestovne mreže brojenjem prometa uvećana je time što se brojenje ne izvodi svake godine na svim mjestima povremenog automatskog brojenja.

Godine 1998. u Hrvatskoj su po prvi put korištena stacionarna automatska brojila s mogućnošću razvrstavanja vozila. Bilo je to prvih 15 brojila *ADR-2000* engleske tvrtke *Peek Traffic*, koja su bila programirana tako da motorna vozila razvrstavaju u pet duljinskih razreda. Godine 1999. na brojilima *QLD 6X* slovenske tvrtke *Mikrobit* eksperimentalno je testirana daljinska dvosmjerna bežična GSM komunikacija između brojila i informacijskog centra brojenja prometa na hrvatskim cestama, koja ubrzo postaje uobičajenim načinom najprije prijenosa podataka, a potom i nadzora brojila. Ta brojila ujedno su i prva u nas koja motorna vozila razvrstavaju u željene skupine na osnovi magnetske slike vozila. U godini 2000. započela je primjena sunčeve energije za napajanje stacionarnih brojila, čime se znatno povećala njihova autonomnost.

Automatska brojila prometa *HAB-3.3*, hrvatske tvrtke *Lik-elektronika*, namijenjena neprekidnom brojenju prometa, koja se također zasnivaju na elektromagnetskoj detekciji vozila po prvi su puta instalirana na hrvatskim cestama 2006. godine. Ta su brojila postavljena umjesto starije vrste brojila i na novouvedenim brojačkim mjestima. Brojila su uglavnom kompatibilna s drugim u nas korištenim stacionarnim brojilima, omogućuju daljinski nadzor i prikupljanje podataka i vozila mogu razvrstavati u 8+1 skupinu, odnosno 15 brzinskih razreda.

Težeći uporabi naprednijih stacionarnih brojila, potkraj 2008. godine na 15 novih brojačkih mjesta instalirana su automatska brojila prometa *QLD-6CX nano*, slovenske tvrtke *Mikrobit*. Brojila su integrirana s komunikacijskim modulom i regulatorom napajanja te su bitno manjih dimenzija i potrošnje struje od prethodnih brojila. Vozila razvrstavaju u željene skupine na osnovi magnetskih slika. U sklopu GSM standarda, prijenos podataka moguć je CSD i GPRS načinom.

Tijekom 2017. godine zamijenjena su i zadnja brojila starijih tipova kojima je istekao vijek trajanja novim brojilima tipa *QLD-6CX nano*. Izvršeno je unaprjeđenje ugrađenog programa na svim brojilima kako bi se omogućilo daljinsko prikupljanje podataka o pojedinačnim prolascima vozila.

Nakon što je godine 1997. napušten razvrstaj cesta u magistralne, regionalne i lokalne ceste, uveden je razvrstaj u državne, županijske i lokalne ceste, a kasnije su, kao posebna vrsta cesta, uvedene i autoceste.

Sve do završetka 1979. godine brojačka su mjesta uzduž određene ceste označavana brojem brojačkog odsječka na kojem su se nalazila. Takvo označavanje s vremenom se pokazalo neprikladnim pa je 1980. godine uvedeno označavanje brojačkih mjesta jedinstvenim troznamenkastim brojevima kojima je prva znamenka upućivala na razvrstanost ceste i način brojenja. U 2002. godini za brojila s daljinskim bežičnim prijenosom podataka umjesto vodeće znamenke uvedena je slovna oznaka. U sustavu označavanja naplatnih brojačkih mjesta sa zatvorenim naplatnim sustavom određenoj naplatnoj postaji pridruživao se troznamenkasti broj, a promet pridružen tom brojačkom mjestu odnosio se na promet određenog odsječka.

U sklopu poslova unaprjeđenja sustava brojenja godine 2003. obavljena je opširna revizija brojačkih mjesta, brojačka su mjesta geopozicionirana i primijenjeno je novo označavanje brojačkih mjesta. Od tada broj brojačkog mjesta ima četiri znamenke, od kojih prve dvije predstavljaju broj zemljovidnog kvadranta u kojem se brojačko mjesto nalazi, a druge dvije znamenke redom se pridružuju brojačkim mjestima u kvadrantu. Budući da se promet uzduž

autocestovnih odsječaka općenito dobiva obradom podataka skupa naplatnih postaja, osim u slučaju čelnih naplatnih postaja, a zbog zadržavanja kompatibilnosti s označavanjem brojačkih mjesta na državnim cestama, svaki autocestovni odsječak (dio autoceste između dviju susjednih naplatnih postaja, odnosno susjednih čvorova autoceste) dobiva virtualno brojačko mjesto sa svojim brojem, poput stvarnog brojačkog mjesta. Kao i ranije, brojačka mjesta imenuju se po najbližem pogodnom toponimu, najčešće imenu naselja. U vođenju podataka o cestovnim vozilima prevezenim morskim trajektima nije bilo promjena pa se broj vozila prevezenih morskim trajektima vodi i predočava po domaćim trajektnim linijama, a trajektne linije definirane su lukama, pristaništima i brojčanim oznakama.

Valja istaknuti da je elektronički zemljovid Hrvatske s novooznačenim brojačkim mjestima brojenja prometa na hrvatskim cestama izveden u Gauß-Krügerovoj projekciji, u petoj zoni. U zemljovidnom prikazu brojačkih mjesta svakom brojačkom mjestu pridružuje se i odgovarajuća grafička oznaka, koja upućuje na način brojenja prometa.

2.2. METODOLOGIJA BROJENJA PROMETA

2.2.1. Metode brojenja prometa

2.2.1.1. Povremeno automatsko brojenje prometa

Povremeno automatsko brojenje (PAB) izvršava se u određenim vremenskim razdobljima na način planiran rasporedom brojenja. Pruža nam solidnu osnovicu za stjecanje predodžbe o mijeni prometa po:

– satima u danu brojenja (za svaki tjedni dan)

– tjednim danima u tjednu brojenja

– tjednima obuhvaćenim brojenjem.

Stabilnost općih okolnosti je ključna pretpostavka za reproduciranje obrazaca mijene prometa tijekom godine i/ili ljeta i dobivanje prihvatljivo dobrih procjena od godine do godine na temelju pravilno raspoređenog vremenskog uzorka. U postupku stvaranja rasporeda povremenog automatskog brojenja i definiranja metodologije obrade prikupljenih podataka vodilo se računa o sljedećim zahtjevima:

(1) smanjenju troškova provedbe

(2) izvođenju brojenja u pogodnom dijelu godine kako bi se izbjegli troškovi što ih mogu izazvati nepovoljne vremenske prilike i povećala pouzdanost brojenja

(3) optimalnom iskorištenju raspoloživog broja prenosivih automatskih brojila

(4) zadržavanju relativne pogreške procjene PGDP-a i/ili PLDP-a unutar prihvatljivih okvira.

Moraju se uvažavati i druga praktična ograničenja kao, na primjer, to da je između dva vremenski bliska brojačka tjedna u rasporedu povremenog brojenja nužno osigurati dovoljno vremena za postupke demontiranja brojila, očitanje podataka, pripremu i programiranje brojila za novi tjedan brojenja te njihovo postavljanje na druga brojačka mjesta.

Uvažavajući navedene zahtjeve, korištenjem metoda kombinatorike i simulacije na širokom višegodišnjem uzorku brojačkih mjesta neprekidnog automatskog brojenja (NAB) s, poželjno, 100-postotnom zastupljenošću sati brojenja i vjerodostojnim podatcima, ustanovljeno je koje kombinacije i kratnosti tjedana rezultiraju najboljim procjenama PGDP-a i PLDP-a.

Slijedom tih spoznaja godišnji plan povremenog brojenja prometa izvodi se na osnovi prostornih i vremenskih odrednica, raspoloživih tehničkih kapaciteta i promjena cestovne mreže.

U 2016. godini po prvi put je u godišnji plan povremenog brojenja uključen veći broj novih brojačkih mjesta na županijskim i lokanim cestama. Posebnost je povremenog brojenja na ovim cestama u tome da se brojenje izvršava svake kalendarske godine tijekom jednog brojačkog tjedna. Na osnovi tako provedenog brojenja i novouspostavljene metodologije daju se procjene PGDP-a i PLDP-a.

Automatsko brojenje prometa u 2025. godini izvedeno je s 633 stacionarna i 84 prijenosna automatska brojila prometa.

2.2.1.2. Neprekidno automatsko brojenje prometa

Neprekidno automatsko brojenje prometa (NAB) oslanja se na uporabu stacionarnih automatskih brojila prometa ugrađenih na brojačkim mjestima. U uporabi je nekoliko generacija i vrsta ovih brojila, a

zajedničko im je to da bilježe količine prometa po zadanim vremenskim intervalima (kumulativno po satima, a u novijih i u znatno kraćim intervalima) i prometnim trakovima (smjerovima kretanja vozila), neprekidno tijekom čitave godine. Kako bi brojila ispravno radila i prikupila čim više podataka, nužno je njihovo redovito održavanje.

Stacionarno neprekidno brojenje obavlja se brojilima s aktivnim elektromagnetskim indukcijskim petljama koje su ugrađene u kolnike cesta. Na svakom prometnom traku kolnika nalazi se par indukcijskih petlji spojenih na brojački uređaj. Stacionarna brojila instalirana godine 1998. i kasnije registriraju prolazak svakog vozila iznad petlje, razvrstavajući ga u skupinu vozila određenih karakteristika. Brojila koja su sada u uporabi vozila razvrstavaju s obzirom na elektromagnetsku sliku vozila.

Redovito nadgledanje rada stacionarnih brojila osnova je održavanje brojila. Sustavnim održavanjem, preventivnim i pravovremenim interventnim servisnim aktivnostima značajno se utječe na kakvoću rezultata brojenja prometa.

Autonomno napajanje stacionarnih brojila sunčevom energijom uvedeno je godine 1998. Također je uspostavljena i dvosmjerna komunikacija s brojilom pomoću GSM-modema i odgovarajućih računalnih programa, čime su omogućeni daljinsko preuzimanje podataka, trenutni uvid u intenzitet i strukturu prometa na brojačkom mjestu te kontrola ispravnosti rada i stanja dijelova brojačkog uređaja. Uz to, brojila imaju mogućnost slanja SMS-poruka (primjerice, dojavu o prekidu petlje, neovlaštenom otvaranju ormarića, i sl.).

Stacionarna brojila novijih izvedbi instalirana su od početka godine 1998. Tijekom 2015. i 2016. godine instaliran je veći broj stacionarnih brojila na županijskim i lokalnim cestama. Sva su brojila raspoređena u skladu s usvojenim razmještajem novih brojačkih mjesta neprekidnog automatskog brojenja prometa na državnim, županijskim i lokalnim cestama, tvoreći prostorno reprezentativan uzorak.

2.2.1.3. Naplatno brojenje prometa

Uporaba autocesta te, iznimno, nekih drugih cestovnih građevina (mostova, tunela,…) naplaćuje se uglavnom zbog velikih novčanih ulaganja u njihovu izgradnju i održavanje.

Posebnost brojenja prometa na autocestama očituje se u tome, što se prolazak vozila bilježi s podatcima o vremenu korištenja građevine, vrsti vozila (naplatnoj kategoriji) te o mjestima ulaska i/ili izlaska na naplatnoj građevini.

U ovoj se publikaciji predočavaju i podatci o prijevozu vozila na domaćim pomorskim trajektnim linijama. Brojenje prevezenih vozila na trajektnim linijama posebna je vrsta naplatnog brojenja. Evidencija o prevezenim vozilima vodi se po linijama za određeno razdoblje prema pojedinim vrstama vozila. Brojenje prometa na domaćim trajektnim linijama obavljaju tvrtke koja obavljaju trajektni prijevoz.

2.2.2. Metode prikupljanja podataka

Sastavnice informacijskog sustava brojenja prometa u nas i osnovni podatkovni tokovi predočeni su na priloženoj slici 1. Riječ je o sustavu s brojnim sudionicima, u kojem se prikuplja, distribuira i obrađuje ogromna količina podataka, a obrade podataka obavljaju se kako na izvornim podatcima svakog sudionika tako i na centralno prikupljenim podatcima.

Tvrtka PROMETIS projektirala je i u informacijski sustav Hrvatskih cesta uklopila SQL Server relacijsku bazu podataka u kojoj se prometni podatci prikupljeni sa stacionarnih automatskih brojila prometa pohranjuju na siguran način. Podatci su strukturirani tako da omogućuju zahtjevne obrade poput onih potrebnih za izdavanje ove publikacije.

Metode prikupljanja podataka prilagođene su različitim izvorima podataka u sustavu:

- Za *povremeno automatsko* brojenje koriste se prijenosna brojila. Brojila se po demontiranju prenose do opreme za očitavanje gdje se korištenjem programske podrške proizvođača opreme podatci očitavaju i pohranjuju za daljnju obradu.
- Podatci sa stacionarnih brojila namijenjenih *neprekidnom automatskom* brojenju prometa prikupljaju se u pravilu putem dvosmjerne GSM komunikacije. Iznimno se podatci mogu očitati i lokalno korištenjem prijenosnih računala s odgovarajućom programskom podrškom.
- Podatci dobiveni *naplatnim* brojenjem prikupljaju se od tvrtki koje upravljaju cestovnim građe-

vinama te od tvrtki koje se bave prijevozom cestovnih vozila u domaćem trajektnom pomorskom prometu. Oblik prikupljenih podataka uvelike varira od tvrtke do tvrtke i potrebno ga je prilagoditi daljnjoj obradi.

– U sustavu se prikupljaju i obrađuju i ostali podatci potrebni za izradu publikacija i izvješća. Radi se o statističkim i deskriptivnim podatcima prikupljenim od državnih institucija (prije svega Državnog zavoda za statistiku i Ministarstva unutarnjih poslova), Hrvatskih cesta te mnogih drugih.

Metodologija prikupljanja podataka prilagođava se i unaprjeđuje sukladno tehnološkom razvoju brojačke, komunikacijske i informatičke opreme. Te promjene bitno utječu, a i ubuduće će utjecati, na opseg, kvalitetu i brzinu dostupnosti prometnih informacija u sustavu.

2.2.3. Metode obrade podataka i predočavanja rezultata

Kao i u svim prethodnim godinama, obrada podataka i predočavanje rezultata brojenja prometa na hrvatskim cestama u 2025. godini zasniva se na posebno razvijenoj metodologiji. Ta metodologija obuhvaća sve postupke izrade i primjene cjelovite programsko-računalne podrške i stalno se unaprjeđuje. Njome su obuhvaćeni brojni postupci upravljanja podatcima, kao što su upis, provjeravanje vjerodostojnosti, ispravljanje i priprema za obradu podataka, stvaranje datoteka, arhiviranje podataka, obrada i analiza podataka, te tekstualno, tablično i grafičko oblikovanje i predočavanje rezultata u različitim oblicima. Kako se, osim publikacije s podatcima za čitavu brojačku godinu, izdaje i publikacija s prethodnim podatcima o PLDP-u, a prema posebnim zahtjevima i pojedinačni elaborati, metodologija obrade podataka morala je biti prilagođena i tim potrebama.

Ukratko opisana metodologija neprekidno se usavršava i usklađuje kako s razvojem tehnologija brojenja prometa tako i s razvojem računala i informatičkih tehnologija. Vrlo je važno stalno školovanje stručnjaka koji se bave metodološkim i provedbenim pitanjima sustava brojenja prometa na hrvatskim cestama. Održavanje razine vrsnosti brojenja prometa na hrvatskim cestama jamči da će korisnici brojenja prometa raspolagati pouzdanim podatcima na dugi rok te da će raznovrsna prometna i vezana istraživanja imati stabilan i vjerodostojan izvor podataka.

Obrada podataka o izbrojenom prometu odvija se u više faza. Na obradu utječu, pored ostaloga, i načini brojenja prometa i prikupljanja podataka. U osnovi, obrada započinje kontrolom i verifikacijom izvornih podataka. Nakon višestrukog "pročišćavanja", prikupljeni se podatci pohranjuju na odgovarajućim elektroničkim medijima.

Postupak obrade podataka neprekidnog automatskog brojenja prometa razlikuje se u zavisnosti o stupnju popunjenosti podataka za neko brojačko mjesto. Kada je brojenjem postignuta potpuna pokrivenost ili je odstupanje od toga neznatno, PGDP i PLDP se izračunavaju kao aritmetička sredina izbrojenog prometa u odnosnom razdoblju. Na temelju analize vremenskih serija primjenjivih na takva brojenja, u slučaju nedostajanja podataka za jedan smjer ili kratka vremenska razdoblja, osmišljen je postupak kojim se nedostajući podatci mogu nadomjestiti podatcima koji u obzir uzimaju podatke o prometu u ranijim razdobljima.

Nedostaju li podatci za stanovito mjesto neprekidnog automatskog brojenja prometa u toj mjeri da čine upitnim izračunavanje PGDP-a i PLDP-a kao aritmetičke sredine odgovarajućeg izbrojenog prometa, izvodi se procjena putem relativno složenog statističko-matematičkog postupka. Uspješnost provođenja neprekidnog brojenja prometa uvelike utječe na pouzdanost rezultata obrade podataka cijelog sustava automatskog brojenja prometa te je stoga provjera rada stacionarnih automatskih brojila neizostavna i trajna aktivnost izvoditelja brojenja prometa.

Postupak obrade podataka u povremenom automatskom brojenju prometa zasniva se na rezultatima prethodno izvršene obrade podataka dobivenih neprekidnim automatskim brojenjem. Analizom tih rezultata za tekuću godinu, ali i za odgovarajući broj prethodnih godina brojenja, izdvajaju se brojačka mjesta odgovarajuće pokrivenosti brojenjem, zadovoljavajućom stabilnosti općih prometnih uvjeta i odgovarajuće prometne uloge. Podatci takvih brojačkih mjesta u daljnjem dijelu postupka imaju ulogu referentnog skupa podataka.

Krajnji rezultat obrade podataka povremenog brojenja procjene su PGDP-a i PLDP-a izvedene iz bro-

jenja koja se provode jednom ili dva puta godišnje u trajanju od po tjedan dana. Obrada podataka razlikuje se za brojačka mjesta na kojima je brojenje provedeno u godini za koju se vrši obrada od onih na kojima je brojenje provedeno u nekoj od prethodnih godina.

Procjenjivanje PGDP-a i PLDP-a za brojačko mjesto na kojem je u predmetnoj godini izvršeno povremeno brojenje odvija se usporedbom prikupljenih podataka sa cijelim nizom datoteka dobivenih neprekidnim brojenjem u odnosnoj i prethodnim godinama. Pritom se koriste prikladni prilagodbeni faktori, a uspoređuju se isključivo istovrsni dani u tjednu. Za svaki par datoteka ustanovljuju se koeficijenti determinacije i maksimalnog odstupanja.

Metodologijom se ne dobivaju automatski i konačni rezultati povremenog brojenja u obliku procjene PGDP-a i PLDP-a, već se na osnovi izračunanih koeficijenata sužava skup ponuđenih rezultata. Svaki ponuđeni rezultat iz skupa i pripadajuće mu koeficijente, analizira stručna osoba i donosi, na iskustvu zasnovan, individualni izbor.

Na brojačkim mjestima na kojima je povremeno automatsko brojenje provedeno u jednoj od prethodnih godina (jednu ili dvije prije one za koju se izvodi procjena) procjena se temelji na podatcima dobivenim u odnosnoj godini brojenja te na odgovarajućim podatcima za brojačka mjesta NAB-a iz iste godine i godine za koju se izvodi procjena. Ta godina, za koju se izvodi procjena, može se smatrati prognostičkom. Metodom simulacije, nakon brojnih pokušaja, ustanovljen je niz postupaka za procjenjivanje (izračunavanje) PGDP-a odnosno PLDP-a, koji je nazvan *pempe model*.

Spomenuti *pempe model* provodi se fazno. U prvoj fazi, za sva brojačka mjesta koja se namjerava obraditi tim modelom, dakle i brojačka mjesta PAB-a i brojačka mjesta NAB-a, valja prethodno ustanoviti kakva im je pokrivenost brojenjem. Zatim je za brojačka mjesta koja imaju dovoljnu pokrivenost potrebno izračunati PGDP i PLDP. Nakon toga postupkom se dobiva pet brojačkih mjesta NAB-a koja se uređuju po redu od najveće prema manjoj vrijednosti koeficijenta determinacije (r^2) s ciljanim brojačkim mjestom PAB-a na kojem je brojenje provedeno jednu ili dvije godine prije prognostičke godine. Postupak rezultira ponudom inačica prognoziranog PGDP-a ili PLDP-a od kojih korisnik *pempe modela* može izabrati jednu, na temelju svog vrednovanja svake od njih.

U naplatnom brojenju prometa obrada podataka brojenja prometa na autocestama i na građevinama s naplatom uporabe temelji se na posebnim postupcima, prilagođenima tim načinima prikupljanja i oblikovanja prikupljenih podataka, kao i posebnom načinu prikazivanja rezultata obrade.

Strukturiranje i prikazivanje rezultata svih načina brojenja prometa u proteklom su razdoblju stalno prilagođavani potrebama korisnika, uz zadržavanje kontinuiteta temeljnih postavki radi lakšeg snalaženja i očuvanja usporedivosti podataka u višegodišnjim serijama. I u ovogodišnjoj publikaciji uvedena su unaprjeđenja u prikazu podataka što će olakšati njihovo tumačenje. U tablicama sa strukturom prometa za brojila neprekidnog automatskog brojenja različitim su bojama prikazani podatci različitih tipova brojila. Za određen tip brojila ista je boja dosljedno korištena i u kartografskom prikazu rasporeda brojačkih mjesta i u tablicama s objašnjenjem skupina vozila. Različitom bojom u publikaciji su označeni PGDP i PLDP za neprekidno automatsko brojenje prometa kada podatci predstavljaju **procjenu** na osnovi nepotpunog skupa podataka ili **PDP** za dio razdoblja. I na priloženim kartografskim prikazima s intenzitetom prometa na odabranom dijelu cestovne mreže ovakvi su podatci označeni odgovarajućom bojom.

Metodologija prikazivanja rezultata prikupljanja i obrade podataka u ovoj publikaciji obuhvaća:

- *više inačica tabličnog prikazivanja strukture PGDP-a i PLDP-a uvjetovanih posebnostima različitih načina prikupljanja podataka*
- *grafičke prikaze PGDP-a za odsječke i priključne ceste autocesta dobivenih obradom podataka prikupljenih na autocestama sa zatvorenim sustavima naplate*
- *odabrane grafičke prikaze rezultata obrade podataka prikupljenih na mjestima neprekidnog automatskog brojenja*
- *informativni grafički prikaz kretanja vrijednosti PGDP-a i PLDP-a u petogodišnjem razdoblju po brojačkim mjestima ili odsječcima cestovnih građevina s naplatom prolaska vozila*
- *kartografski prikaz razmještaja brojačkih mjesta*
- *kartografski prikazi intenziteta prometa na relevantnom dijelu cestovne mreže.*

Godišnja publikacija brojenja prometa zbog opsežnosti ne sadrži sve rezultate obrade, a i jer se pretpostavlja da nisu zanimljivi širem krugu korisnika, nego se po zahtjevu, najčešće "Hrvatskih cesta", neobjavljeni podatci dostavljaju u obliku računalnih tablica i/ili grafikona ili kao posebna publikacija odabranih rezultata.

Neobjavljeni podatci povremenog automatskog brojenja prometa sadrže za svako brojačko mjesto:

- *promet po danima brojenja s prometom stvarnih vozila po satima i smjerovima*
- *sastav danjeg, noćnog i prosječnog godišnjeg, 24-satnog prometa s odgovarajućim prosjecima po određenim skupinama vozila*
- *PDP (prosječan 24-satni promet za proizvoljno vremensko razdoblje) po danima i smjerovima brojenja*
- *strukturu vozila po skupinama i smjerovima po satima brojenja*
- *prosječne temperature kolnika po satima brojenja.*

Neobjavljeni podatci neprekidnog automatskog brojenja mogu se, po brojačkim mjestima, predočiti kao:

- *prosječan satni promet (prema smjeru i ukupni) za zadana vremenska razdoblja u godini te promet u vršnim satima*
- *PDP (24-satni) po danima u tjednu (prema smjeru i ukupni)*
- *PDP (24-satni) za radne dane, subote, nedjelje i blagdane (prema smjeru i ukupni)*
- *raspodjela prometa u odabranim satima s najvećim satnim prometom*
- *promet za svaki sat brojenja te maksimalni satni promet (prema smjeru i ukupni) za svaki dan brojenja*
- *sastav danjeg i noćnog prometa.*

U nekim tabličnim prikazima korisnik će primijetiti oznaku "**. . .**" koja znači da nema podataka ili ih nema dovoljno da bi bili uvršteni u publikaciju. Oznaka "**–**" ima malo drugačije značenje, odnosno, koristi se tamo gdje prometa uopće nije bilo pa ga, naravno, nije niti moguće iskazati.

2.2.4. Izvori prikupljenih podataka za 2025. godinu

Temeljem plana i programa brojenja prometa koji *Hrvatske ceste d.o.o.* donose prije svake kalendarske godine, brojenje prometa u Republici Hrvatskoj i u 2025. godini obavljeno je:

- *na državnim cestama*
- *na cestovnim građevinama s naplatom prolaska vozila*
- *na županijskim cestama*
- *na lokalnim cestama*
- *u trajektnim pristaništima.*

Za prikupljanje podataka o količini i strukturi prometa, korištena su tri osnovna načina brojenja:

- *neprekidno automatsko brojenje brojilima instaliranim na državnim, županijskim i lokalnim cestama*
- *povremeno automatsko brojenje brojilima na državnim, županijskim i lokalnim cestama*
- *naplatno brojenje na autocestama, drugim cestovnim građevinama s naplatom prolaska vozila i na trajektnim pristaništima*.

U publikaciji *Brojenje prometa na cestama Republike Hrvatske godine 2025.* sadržani su obrađeni podatci s **940** brojačkih mjesta. Tome se pridodaju podatci o prometu na **78** odsječaka izvedeni iz podataka prikupljenih na naplatnim postajama cesta sa zatvorenim sustavom naplate. Brojačka mjesta za koja su predočeni podatci, s obzirom na njihovu raspodjelu po statusu ceste i načinu brojenja, bila su:

- *na državnim cestama i autocestama **605**, od kojih je na **394** promet brojen automatskim neprekidnim brojenjem, na **114** automatskim povremenim brojenjem te na **97** putem naplate*
- *izvedeni podatci o prometu na **78** odsječaka na cestovnim građevinama s naplatom prolaska vozila (matrični izračun) iz podataka prikupljenih na brojačkim mjestima – naplatnim postajama cesta sa zatvorenim sustavom naplate*
- *na županijskim cestama **245**, od kojih je na **198** promet brojen neprekidnim, a na **47** povremenim automatskim brojenjem*
- *na lokalnim i nerazvrstanim cestama **66**, od kojih je na **24** promet brojen neprekidnim, a na **42** povremenim automatskim brojenjem*
- *na **24** domaće pomorske trajektne linije u obliku naplatnog brojenja.*

Tablica 2.1. Struktura razvrstane cestovne mreže Republike Hrvatske u 2025. godini

Razvrstane ceste (km)				
Ukupno razvrstane ceste	**Državne**	**Županijske**	**Lokalne**	**Autoceste**
26.714,4	7.442,9	9.339,5	8.439,6	1.492,4*

Izvor : Odluka o razvrstavanju javnih cesta (NN 109/2025).

*Uključuje planirane neizgrađene autoceste te ceste koje još nisu izgrađene u punom profilu autoceste. Koncem 2025. godine Hrvatska je imala izgrađenih oko 1.350 km autocesta (PROMETIS d.o.o.).

Podatci o izbrojenom prometu na cestama i trajektnim linijama u 2025. godini dobiveni su iz sljedećih izvora (prema vrsti prikupljenih podataka):

- *PROMETIS*, za podatke sa stacionarnih automatskih brojila Hrvatskih cesta
- *PROMETIS*, za podatke s prenosivih automatskih brojila
- *Hrvatske autoceste,* za podatke o prometu na autocestama A1, A3, A4, A5, A6, A10, A11 i NP Rupa (A7)
- *Autocesta Zagreb-Macelj,* za podatke o prometu autocestom A2
- *BINA-Istra,* za podatke o prometu autocestama A8 (Kanfanar – Učka) i A9 (Umag – Pula)
- *Agencija za obalni linijski nacionalni promet, Jadrolinija i Rapska plovidba,* za podatke o prijevozu vozila na domaćim trajektnim linijama.

Tijekom 2025. godine uspješnost prikupljanja podataka neprekidnim automatskim brojenjem prometa iznosila je oko 96%. Količina podataka koja ove godine nije prikupljena značajno je veća nego prethodnih godina zbog diskontinuiteta u održavanju brojačke opreme i sustava prikupljanja podataka.

2.3. ODABRANI PODATCI O CESTAMA I PROMETU

Od mnogobrojnih značajki i statističkih pokazatelja vezanih uz cestovni promet u 2025. godini, ali i u izabranim ranijim godinama, ovdje se navodi nekoliko: struktura cestovne mreže (duljina pojedinih skupina razvrstanih cesta i autocesta) s osnovnim promjenama u 2025. godini u odnosu na godinu prije, podatci o registriranim cestovnim motornim vozilima i prikolicama te o sigurnosti prometa na cestama.

U godini 2025. razvrstane ceste bile su utvrđene

Tablica 2.2. Struktura registriranih cestovnih motornih i priključnih vozila u razdoblju od 2019. do 2025. godine

Vrsta vozila	Godina						
	2019.	**2020.**	**2021.**	**2022.**	**2023.**	**2024.**	**2025.**

Poluprikolice	14.629	15.517	16.516	17.342	18.187	18.830	19.504
Ukupno, bez prikolica	**2.226.975**	**2.261.274**	**2.331.034**	**2.398.667**	**2.494.208**	**2.600.773**	**2.702.217**

Izvor: Bilten o sigurnosti cestovnog prometa, odgovarajuća godišta, za godine 2019.-2024., Ministarstvo unutarnjih poslova Republike Hrvatske

Priopćenje TRAN-2025-1-2 „Registrirana cestovna vozila i cestovne prometne nesreće u 2025.“, Državni zavod za statistiku Republike Hrvatske, Zagreb

Odlukom o razvrstavanju javnih cesta (NN 109/2025).

Gustoća razvrstane cestovne mreže Republike Hrvatske u 2025. godini iznosila je 47 km cesta na 100 km^2 kopnene površine. U istoj godini Hrvatska je raspolagala sa 691 km razvrstanih cesta na stotinu tisuća stanovnika. Struktura cestovne mreže u 2025. godini prikazana je u tablici *2.1.*

Na hrvatskoj cestovnoj mreži zabilježene su u 2025. godini sljedeće značajnije promjene:

- 29. svibnja završena je rekonstrukcija i dogradnja čvora Orehovica na autocesti A6 s novim ulazom na autocestu iz smjera Rijeke i Trsata
- posljednja dionica autoceste A5 koja predstavlja dio međunarodnog koridora Vc puštena je u promet 6. listopada. Dionica od Belog Manastira do granice Mađarske duga je 5 km.
- dovršena je i 3. prosinca puštena u promet sjeverna obilaznica Preloga duljine 6,8 km

Kao i ranije i u 2025. godini nastavak gradnje novih dijelova cestovne mreže pratila je i rehabilitacija državnih i drugih cesta. Ti su radovi također značajno utjecali na prometne tokove.

U tablici *2.2.* predočena je struktura registriranih cestovnih motornih vozila i priključnih vozila u Republici Hrvatskoj u razdoblju od 2019. do 2025. godine.

U 2025. godini porastao je ukupan broj registriranih cestovnih motornih i priključnih vozila. Prosječna starost voznog parka u Republici Hrvatskoj je zamalo 15 godina i približno je ista kao prošle godine. Neispravno je 16,4% vozila koja su pristupila tehničkom pregledu.

Razni su učinci povećanja stupnja motorizacije i razvitka cestovnog prometa. Negativni učinci uključuju, prije svega, prometne nesreće, pogotovo one s nastradalim osobama. Izvješća Svjetske zdravstvene organizacije (WHO) navode da na svjetskim cestama prosječno dnevno strada oko 140.000 osoba, od čega više od 3.400 smrtno. Prometne nezgode najčešći su uzrok smrti u dobnoj skupini od 15 do 29 godina, a ako se stanje ne popravi, do 2030. godine smrtno stradavanje u prometu postat će sedmo na ljestvici učestalosti uzroka smrti u ukupnoj svjetskoj populaciji. Stoga je Generalna skupština Ujedinjenih naroda, kao i za prethodno desetljeće, usvojila rezoluciju "Unaprjeđenje svjetske cestovne sigurnosti" i naložila izradu plana akcije za cestovnu sigurnost 2021. - 2030.

Vlada Republike Hrvatske donijela je nacionalni program sigurnosti cestovnog prometa za to desetogodišnje razdoblje. Osnovni je cilj programa do kraja razdoblja prepoloviti broj poginulih osoba u

Tablica 2.3. Odabrani podatci o sigurnosti prometa na cestama u razdoblju od 2014. do 2025. godine

Godina	Broj vozača	Ukupni broj prometnih nesreća	Prometne nesreće s nastradalim osobama			Poginule osobe	Ozlijeđene osobe
			Sve	s ozlijeđenima	s poginulima		
2015.	2.310.515	32.571	11.038	10.721	317	348	15.024
2016.	2.325.157	32.757	10.779	10.500	279	307	14.596
2017.	2.337.087	34.368	10.939	10.632	307	331	14.608
2018.	2.348.794	33.440	10.450	10.153	297	317	13.989
2019.	2.369.937	31.367	9.695	9.416	279	297	12.885

2021.	2.376.766	31.453	9.146	8.883	263	292	11.918
2022.	2.283.673	32.561	10.005	9.762	243	275	13.329
2023.	2.318.679	34.604	10.633	10.382	251	274	14.204
2024.	2.340.080	35.729	10.734	10.515	219	239	14.298
2025.	2.358.520	35.446	11.057	10.818	239	261	14.422

Izvor: – Bilten o sigurnosti cestovnog prometa, za godine 2015.-2024., odgovarajuća godišta, Statistički pregled temeljnih sigurnosnih pokazatelja i rezultata rada u 2025. godini, Ministarstvo unutarnjih poslova Republike Hrvatske

–– Broj vozača u 2025.: podatak Ministarstva unutarnjih poslova Republike Hrvatske.

cestovnim nesrećama u odnosu na 2020. godinu.

U tablici *2.3.* predstavljeni su odabrani podatci stanja i razvitka osnovnih karakteristika sigurnosti cestovnog prometa u nas u razdoblju od 2015. do 2025. godine.

U 2025. godini došlo je do povećanja broja poginulih osoba u prometu u odnosu na prethodnu godinu. Ipak, s obzirom na to da je broj poginulih osoba još uvijek veći nego referentne 2020. godine, očito je potrebno uložiti dodatni trud kako bi se ostvario plan predviđen nacionalnim planom sigurnosti cestovnog prometa.

Željeni se rezultati najbrže mogu postići usklađenim unaprjeđenjima u sva tri osnovna elemenata koji tvore prometni cestovni sustav (čovjek, vozilo/cesta i propisi/kontrola/sankcije) i njihovih interakcijskih veza. Istraživanja uzroka cestovnih prometnih nesreća provedena u Europskoj Uniji potvrđuju kako su sudionici u prometu ključni čimbenik cestovne sigurnosti. To, dakako, ne znači da tvrtke i tijela koja skrbe o cestama i cestovnom okolišu nisu u obvezi otklanjanja nedostataka prometne infrastrukture i okoliša, osobito kada je riječ o tzv. crnim točkama.

2.4. ANALIZA REZULTATA BROJENJA PROMETA U 2025. GODINI

Podatci dobiveni brojenjem prometa ukazuju na nastavak dugoročne tendencije rasta cestovnog prometa u Hrvatskoj, čime je nadoknađen pad prometa zabilježen 2020. godine, izazvan utjecajem COVID epidemije na kretanja u gospodarstvu i prometu.

Kao i ranijih godina, tijekom 2025. godine velikim su dijelom redovno prikupljani podatci brojenja prometa s planom predviđenih i u ovoj publikaciji zastupljenih brojačkih mjesta. Publikacija sadrži obrađene podatke brojenja prometa s **940** brojačkih mjesta. Uz to, predočeni su i izvedeni podatci za **78** odsječaka cesta s naplatnim brojenjem prometa.

U godini 2025. prikupljeni su podatci sa **616** brojačkih mjesta neprekidnog automatskog brojenja prometa i sa **203** mjesta povremenog automatskog brojenja prometa. Tijekom godine brojilo se na ukupno **97** naplatnih brojačkih mjesta. Sva naplatna brojačka mjesta nalaze se na autocestama. Prikupljeni su i podatci o prevezenim cestovnim vozilima na **24** pomorske trajektne linije.

U 2025. godini nastavljen je proces zamjene tehnologije i metode brojenja iz povremenog u neprekidno na dijelu brojačkih mjesta. Iz programa povremenog brojenja uglavnom su isključena mjesta koja se u skladu s Odlukom o razvrstavanju javnih cesta sada nalaze na nerazvrstanim cestama, a u program su uvedena nova brojačka mjesta na županijskim cestama.

Radovi na nekim cestama značajno su utjecali na promet tih i okolnih cesta. U drugim slučajevima otvaranje novih odsječaka autocesta bitno je utjecalo na promet konkurentnih dijelova državnih cesta.

Tablica 2.4. Raspodjela brojačkih mjesta prema veličini prometa u 2025. godini

PGDP / PDP	Broj mjesta s izračunanim PGDP-om i PDP-om				
	Državne ceste	Autoceste	Županijske ceste	Lokalne ceste*	Sve ceste
0-500	8	0	31	23	62
501-1000	33	0	40	16	89
1001-2000	93	0	58	14	165
2001-3000	75	2	40	6	123
3001-6000	144	5	49	6	204
6001-9000	66	10	15	0	91
9001-12000	34	16	6	0	56
>12000	50	65	6	1	122
Ukupno mjesta	**503**	**98**	**245**	**66**	**912**

U tablicu nisu uključena brojačka mjesta na bočnim naplatnim postajama autocesta.
* uključujući i nerazvrstane ceste

Tablica 2.5. Brojačka mjesta s najvećim PGDP-om i PLDP-om u 2025. godini

Cesta	Oznaka BM	Brojačko mjesto	PGDP	PLDP
D8	5422	Stobreč	59.470	65.364
D8	5423	Solin	53.807	61.213
A1	1916	Lučko - jug	49.357	74.330
D1	5441	Dračevac	49.224	57.663
A1	1931	Zdenčina – jug	48.691	75.586
A1	1920	Jastrebarsko - jug	45.407	73.829
A1	3021	Bosiljevo 1 - zapad	38.960	71.983

Gradske cestovne obilaznice, ponekad i kao dijelovi autocestovnih prometnih pravaca, pokazuju se učinkovitim u izdvajanju tranzitnog prometa iz gradova i dijela njihove okolice, doprinoseći sigurnijem odvijanju ne samo cestovnog nego i drugih oblika prometa.

Na mnogim brojačkim mjestima PGDP i PLDP za 2025. godinu značajno se razlikuju od onih iz prethodne godine. Jednim dijelom radi se o oporavku nakon negativnog utjecaja COVID epidemije na razinu prometa, posebno u 2020. godini, ali postoje i takva brojačka mjestima na kojima se ovogodišnje povremeno brojenje po rasporedu izvelo tri godine nakon prethodnog brojenja na istim mjestima. U trogodišnjem razdoblju snažnije dolaze do izražaja akumulirane promjene i preraspodjele prometnih tokova uslijed otvaranja novih cestovnih dionica pa se novim metodološkim promjenama teži smanjiti razdoblje između dva uzastopna brojenja metodom povremenog brojenja.

Ovogodišnja publikacija predočuje obrađene podatke za **245** brojačkih mjesta automatskog brojenja na županijskim cestama. Od toga su **198** brojačkih mjesto neprekidnog, a **47** povremenog automatskog brojenja. Na lokalnim cestama brojilo se na ukupno **65** brojačkih mjesta automatskog brojenja prometa, od kojih se na **23** mjesta brojilo neprekidno, a na **42** povremeno. U 2025. godini brojilo se i na **jednom** mjestu neprekidnog automatskog brojenja prometa na nerazvrstanim cestama. U odnosu na stanje prije nekoliko godina, značajno je veći broj brojačkih mjesta na županijskim i lokalnim cestama jer su Hrvatske ceste pokrenule i provele postupak nabave i instalacije 165 novih automatskih stacionarnih brojila prometa namijenjenih uspostavi brojačkih mjesta na

Tablica 2.6. Promet državnih cesta 2024. – 2025. godine

Državna cesta	PGDP			PLDP		
	2024.	2025.	Godišnja promjena (%)	2024.	2025.	Godišnja promjena (%)
1	9511	9762	2,6	12066	12260	1,6
2	7782	7929	1,9	7703	7848	1,9
3	6718	6920	3	6940	7192	3,6
5	3030	2710	-11	2992	2700	-9,8
6	2024	2049	1,2	2558	2488	-2,7
7	5693	5789	1,7	5941	6024	1,4
8	7641	7646	0,1	11977	11700	-2,3
Sve ceste	**4858**	**4947**	**1,8**	**6341**	**6371**	**0,5**

Za svaku od izabranih cesta u obzir su uzeti usporedivi odsječci u godinama 2024. i 2025., a proračuni su obavljeni uzimajući u obzir vozilo-kilometre (vkm).

Sve ceste: odnosi se na usporediv uzorak 487 brojačkih odsječaka ukupne duljine 2.233 km za PGDP i 469 brojačkih odsječaka ukupne duljine 2.160 km za PLDP

Tablica 2.7. Promet autocesta 2024. – 2025. godine

Autocesta	PGDP			PLDP		
	2024.	2025.	Godišnja promjena (%)	2024.	2025.	Godišnja promjena (%)

Sve autoceste: 1.193 km.

županijskim i lokalnim cestama.

Rezultati brojenja prometa u godini 2025. u odnosu na 2024. pokazuju povećanje prometa, kako na autocestama, tako i na državnim cestama.

Detaljnija analiza kretanja prometa u 2025. u usporedbi s ranijim godinama prepuštena je korisnicima publikacije u skladu s njihovim specifičnim potrebama. Svrha je publikacije tim korisnicima dati potrebnu potporu kako putem podataka o prometu tako i putem grafičkih prikaza tih podataka. Ovdje su dani tek neki od mogućih pokazatelja prometnih kretanja.

Gledajući općeniti odnos PGDP-a i PLDP-a brojačkih mjesta u 2025. godini, PLDP je, kao i u ranijim godinama, veći od PGDP-a. Usporedbom po pojedinim brojačkim mjestima korisnik lako može ustanoviti razlike između PGDP-a i PLDP-a koje su, u nekih cesta, naročito izražene zbog turističke i/ili tranzitne funkcije ceste. Jako povećan PLDP u odnosu na PGDP bitan je čimbenik smanjene razine usluge nekih cesta ili odsječaka cesta u ljetnom razdoblju.

U tablici *2.4.* prikazana je raspodjela brojačkih mjesta na državnim cestama, autocestama, županijskim i lokalnim cestama u 2025. godini po razredima veličine prometa.

Brojačka mjesta koja su u 2025. godini imala najveći PGDP i PLDP posebno su izdvojena u tablicu *2.5.*

Kako bi se usporedile osnovne značajke prometa državnih cesta u godinama 2024. i 2025., na usporedivom uzorku izračunan je PGDP i PLDP, kao i postotne promjene tih temeljnih pokazatelja. U godini 2025. taj uzorak sadrži 487 brojačkih odsječaka ukupne duljine 2.233 km za PGDP i 469 brojačka odsječka ukupne duljine 2.160 km za PLDP. Istovrsna analiza PGDP-a i PLDP-a i njihovih promjena izvedena je posebno i za državne ceste *1, 2, 3, 5, 6, 7 i 8*. Proračun PGDP-a i PLDP-a izveden je na osnovi ostvarenih vozilo-kilometara (vkm) u odgovarajućim godinama.

U tablici *2.6.* predočeni su PGDP i PLDP spomenutih pojedinačnih državnih cesta, odnosno dijelova tih cesta u godinama 2024. i 2025., te PGDP i PLDP opisanog uzorka svih državnih cesta. Za godine 2024. i 2025. u tablici su predstavljene i postotne promjene kako PGDP-a tako i PLDP-a.

Metodološki gledano, istovrsna analiza obavljena je i za izabrani uzorak autocesta i odgovarajućih brojačkih odsječaka tih autocesta. Ponovno, PGDP i PLDP tih autocesta, odnosno njihovih dijelova, utvrđen je koristeći vozilo-kilometre na usporedivom uzorku autocesta duljine 1.193 km. Ključni rezultati proračuna PGDP-a i PLDP-a izabranih autocesta i njihovih odsječaka za obje godine predstavljeni su u tablici *2.7.*, u kojoj su dani i godišnji postotci

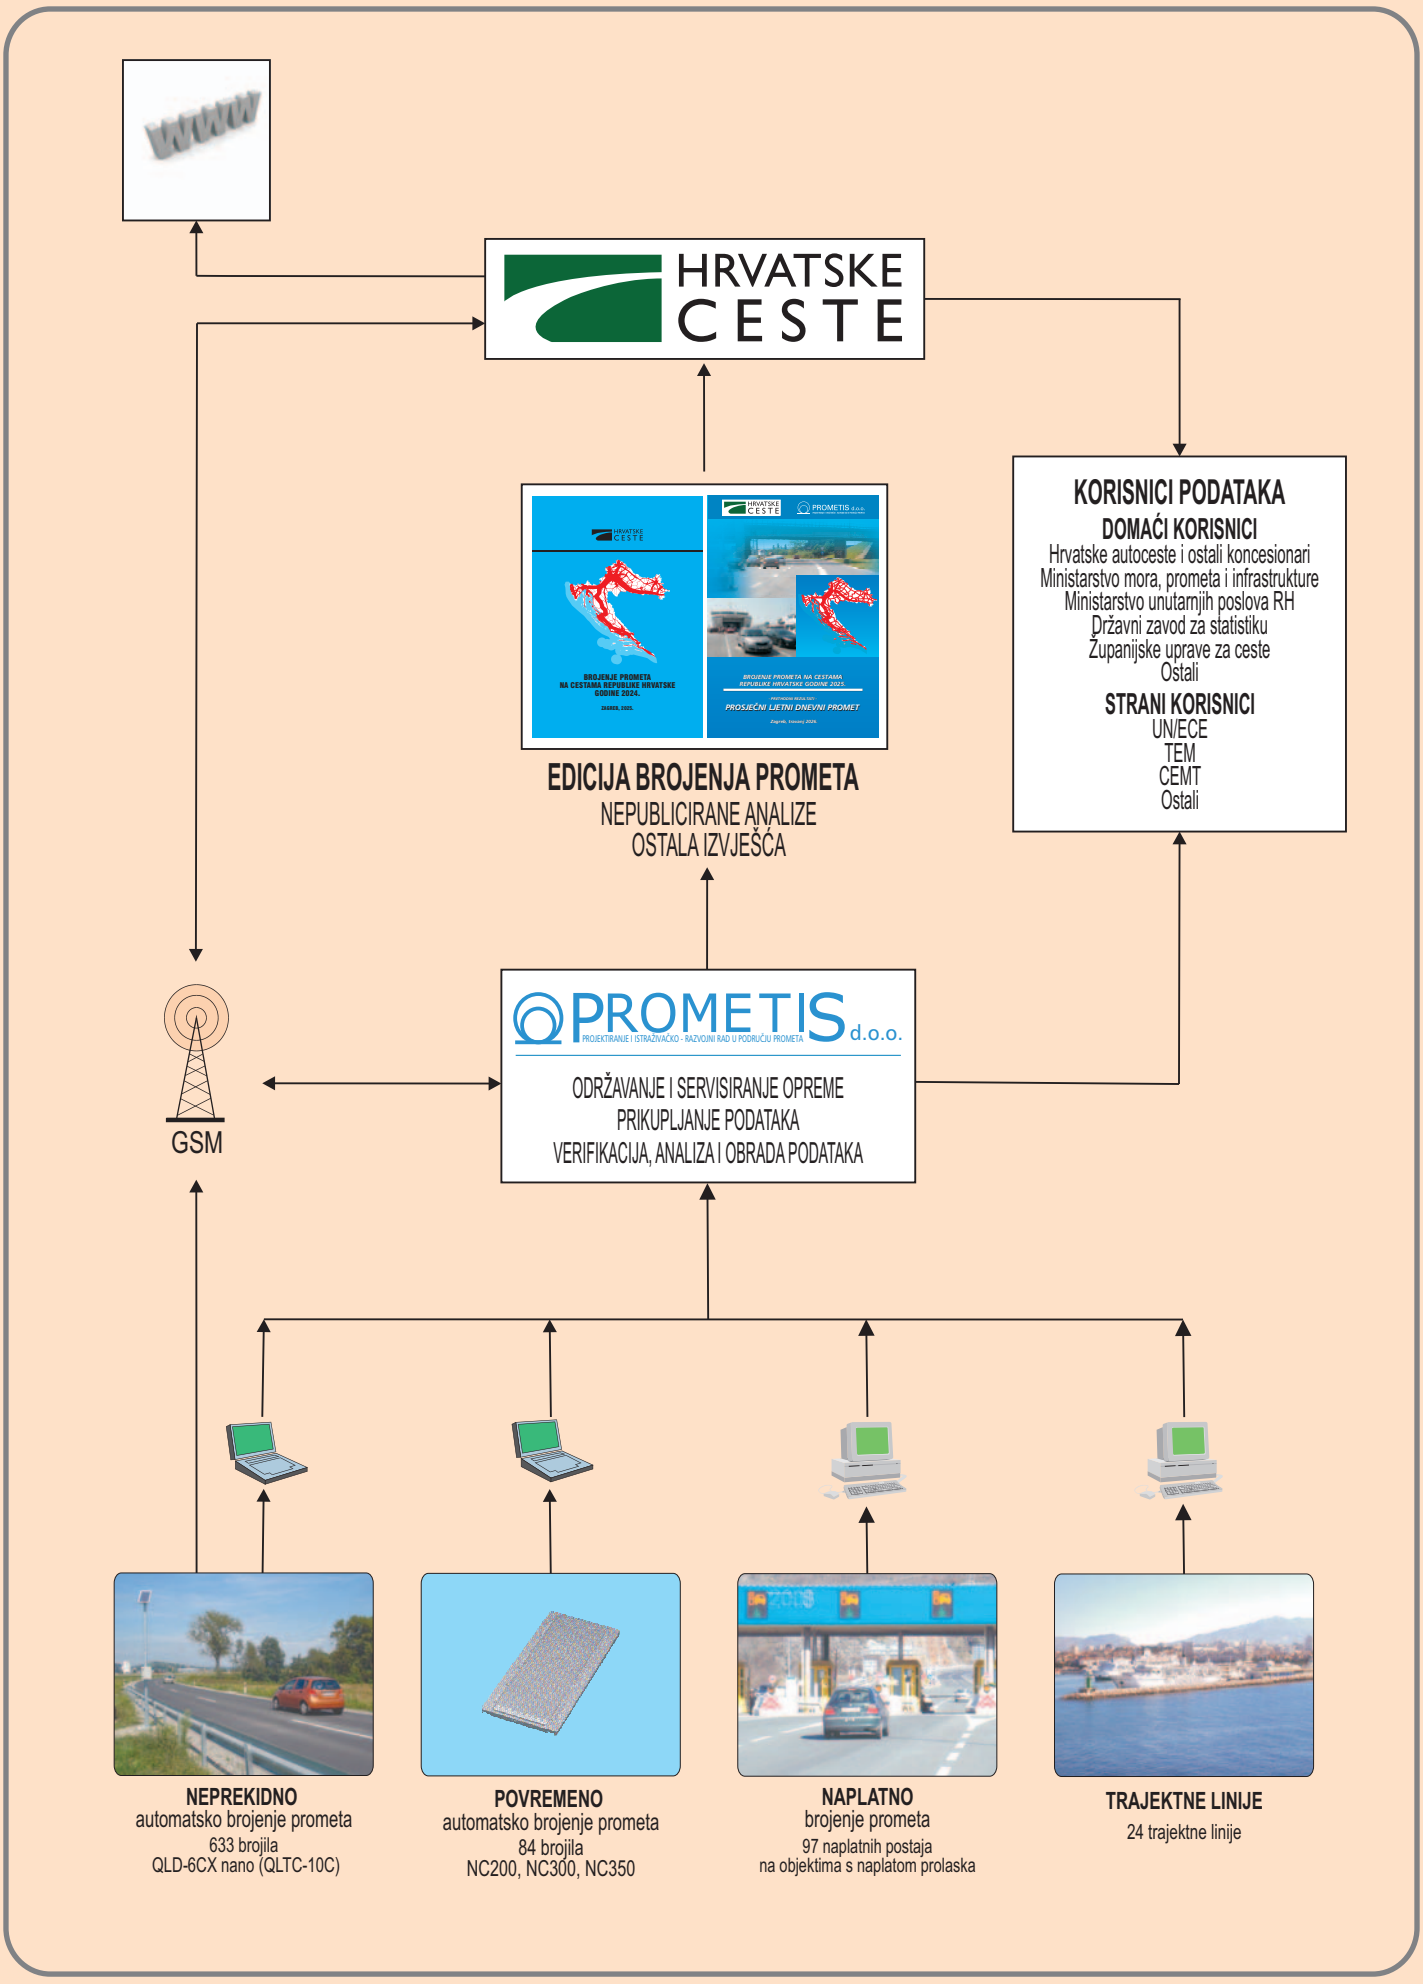

promjene kako PGDP-a tako i PLDP-a opisanog uzorka autocesta.

Na slikama *2a*. i *2b*. dodatno su grafički predočeni podatci prikazani tablicama *2.6.* i *2.7.* Na slici *3.* predočen je broj vozila koja su koristila cestovne građevine s naplatom uporabe u razdoblju između godina 2009. i 2025. Zbog tehnike naplate na Krčkom mostu, postoji samo podatak o godišnjem broju vozila u smjeru prema otoku. Od 2020. godine prolazak vozila Krčkim mostom više se ne naplaćuje. Od 2021. godine ne prikazuju se podatci o prometu vozila naplatne skupine IX (vozila oslobođena plaćanja korištenja cestovnih građevina i vozila kojih se prolazak posebno naplaćuje).

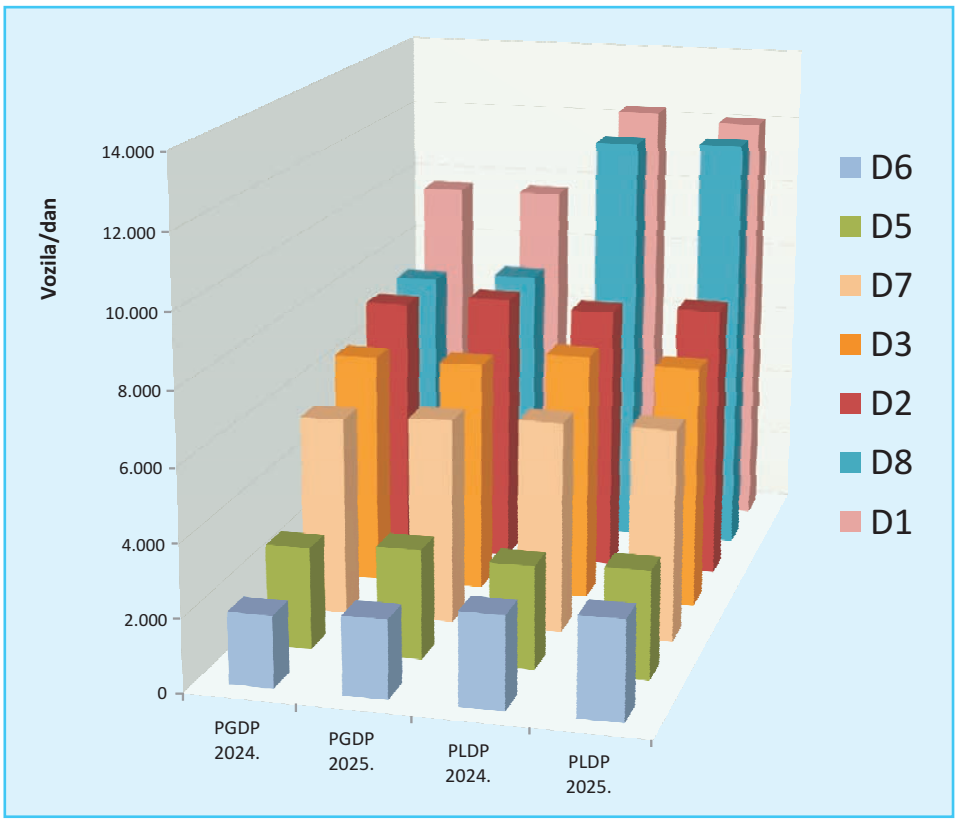

PGDP državnih cesta povećao se u 2025. godini na ukupnom uzorku usporedivih dionica za 3,1% u odnosu na prethodnu godinu, a PLDP za 1,1%.

Također na temelju usporedivog uzorka brojačkih dionica koji se može komparirati s prometom iz 2024. godine, zajednički PGDP državnih cesta i autocesta u 2025. godini veći je 3,9%. Istim metodološkim pristupom ustanovljeno je povećanje PLDP-a za 1,5%.

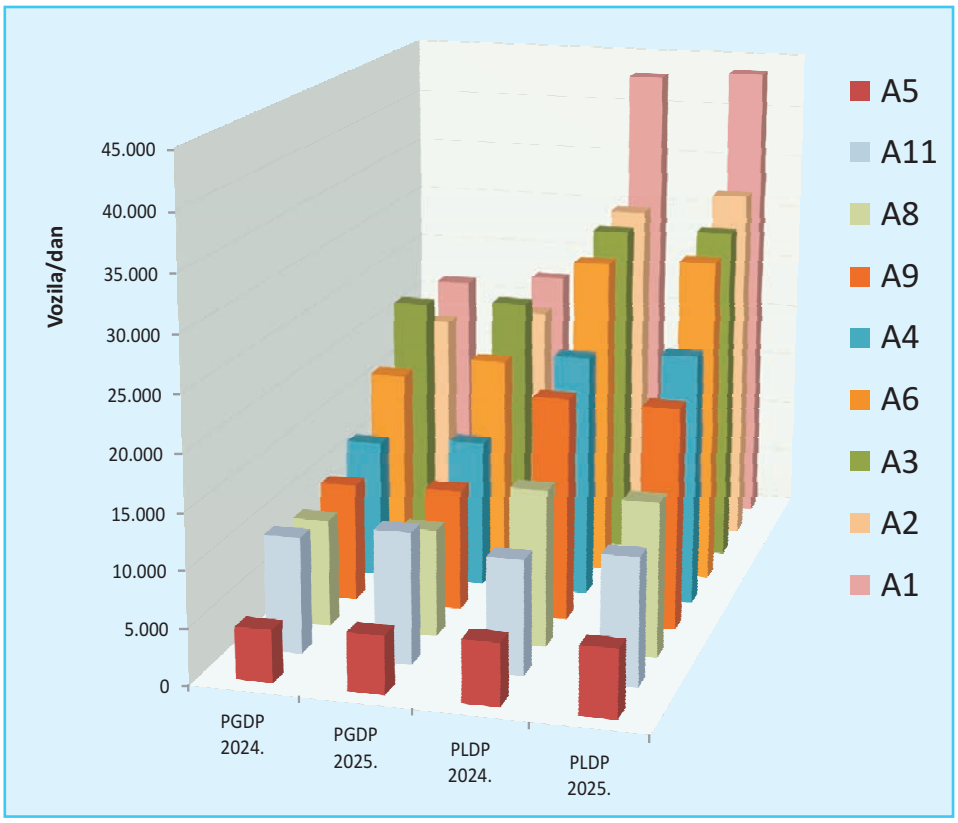

PGDP državnih cesta i autocesta u 2025. godini iznosio je 9.742 vozila, a PLDP 15.425 vozila.

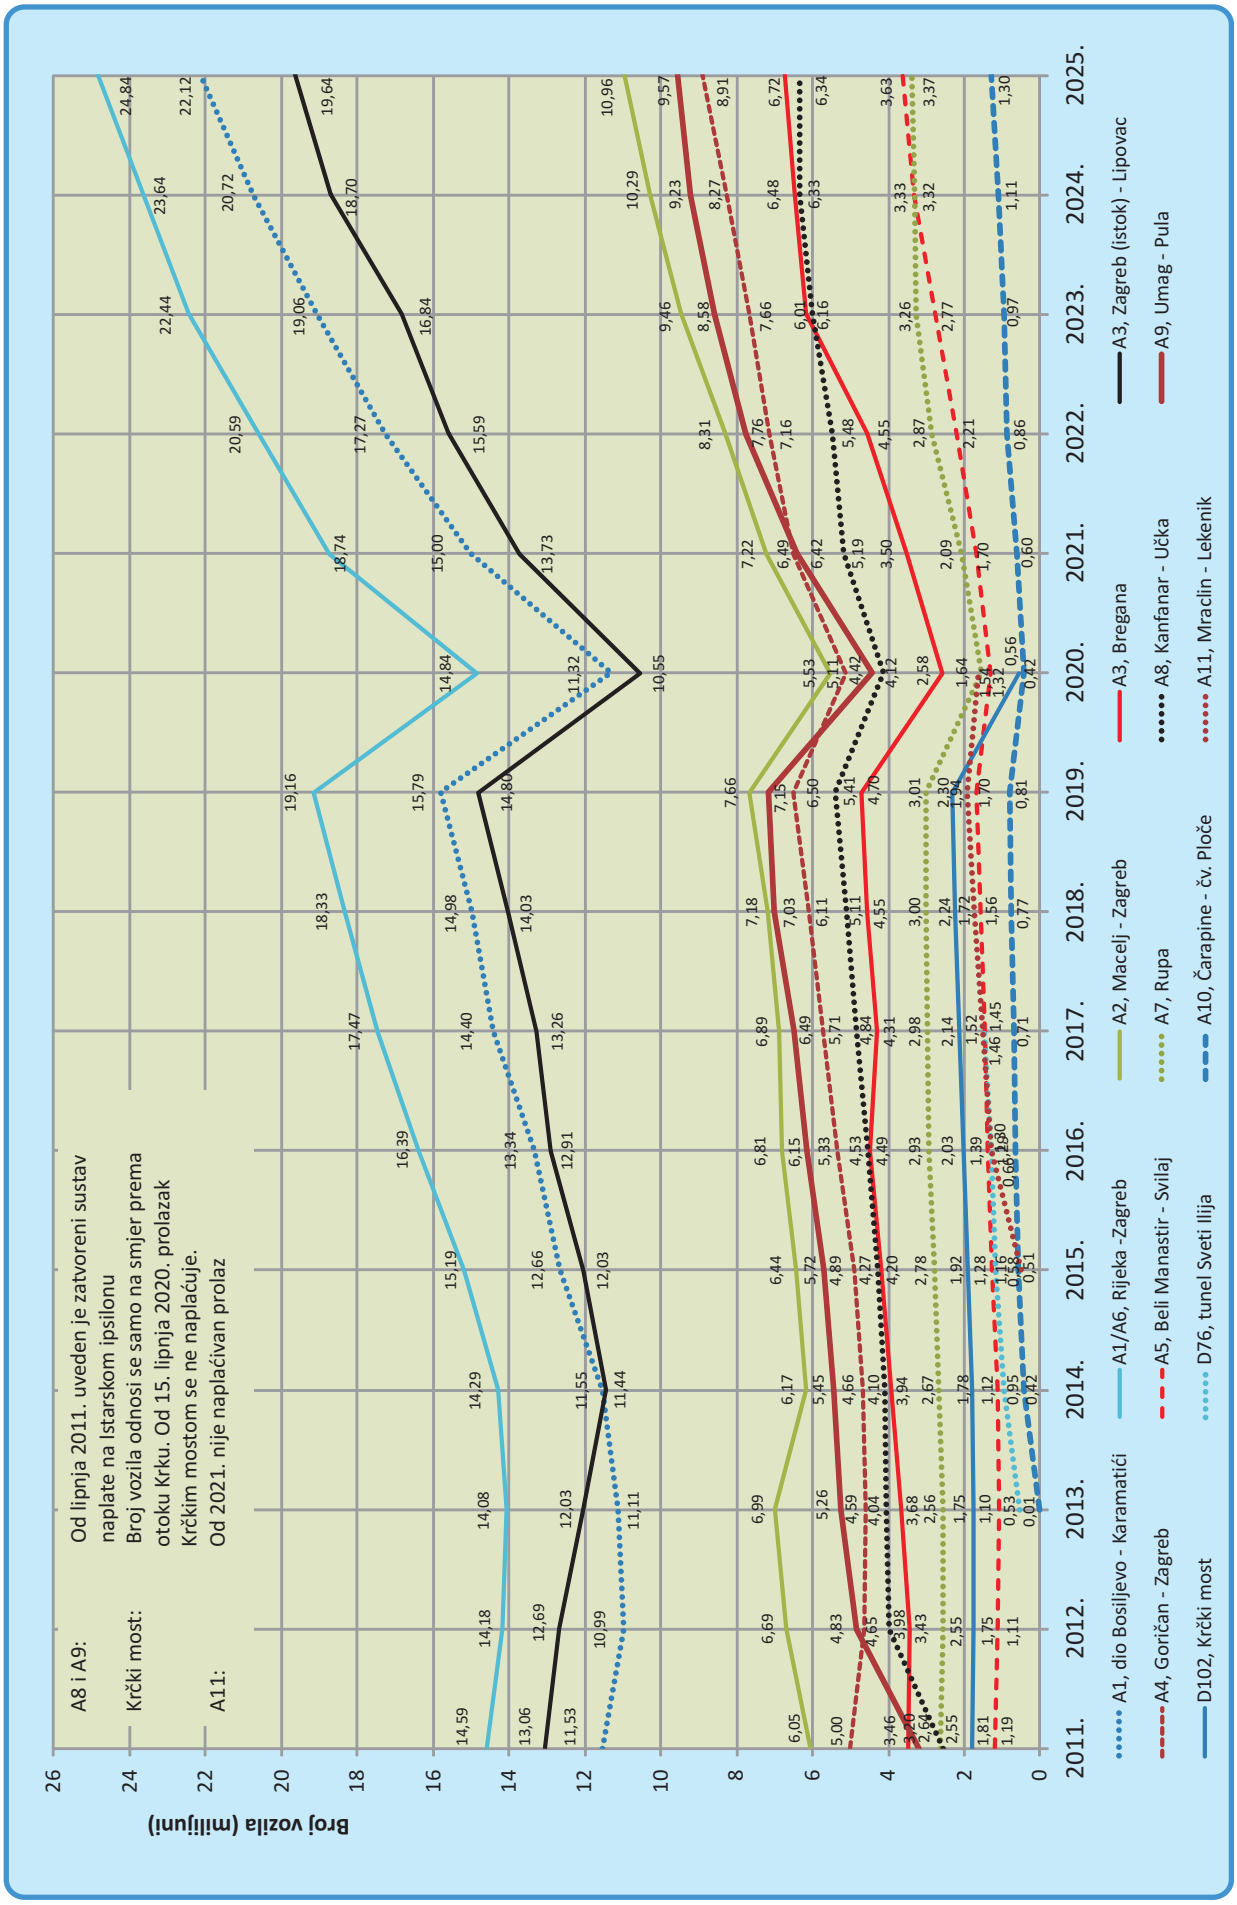

Slika 1. Informacijski sustav brojenja prometa

Slika 2a. PGDP i PLDP usporedivih odsječaka izabranih državnih cesta 2024. i 2025.

PGDP I PLDP S OPĆIM PODATCIMA O BROJAČKIM MJESTIMA I ODSJEČCIMA

3

3. PGDP I PLDP S OPĆIM PODATCIMA O BROJAČKIM MJESTIMA I ODSJEČCIMA

Podatci o PGDP-u i PLDP-u brojačkih mjesta u 2025. godini sažeto su prikazani u trećem poglavlju, zajedno s pripadnim općim podatcima o brojačkim mjestima i brojačkim odsječcima. Poglavlje sadrži četiri tablice. U prvoj su podatci s državnih cesta, u drugoj s autocesta, u trećoj sa županijskih cesta, a u četvrtoj s lokalnih i nerazvrstanih cesta. Poredak brojačkih mjesta u tablicama određen je pripadnošću brojačkog odsječka pojedinoj cesti te položajem brojačkog mjesta odnosno odsječka uzimajući u obzir vođenje ceste.

Sve se ceste raščlanjuju na odsječke ili dionice. Cestovni se odsječci (dionice), ovisno o svrsi za koju se to radi, mogu različito definirati. U brojenju, odnosno mjerenju prometa, pod cestovnim brojačkim odsječkom misli se na onaj na kojem se promet ne mijenja po svom sastavu u pogledu strukture vozila kao i u pogledu raspodjele po izvorištima i odredištima te po svrhama vožnje. To zapravo znači da cestovni brojački odsječak određuju dva susjedna račvališta, bez obzira na formalni status račvališta. Time se ujedno pretpostavlja da između tih susjednih račvališta nema ni ulijevanja niti izlijevanja prometa. Na tako određenom odsječku može se, na izabranom poprečnom presjeku, uspostaviti brojačko mjesto.

Rad na odgovarajućem redefiniranju cestovnih brojačkih odsječaka započet je studijom *Uspostava novog sustava brojenja prometa u Republici Hrvatskoj*. To redefiniranje je, uz stvarne promjene na samoj cestovnoj mreži, uzrok razlikama što se daju uočiti od godine do godine u iskazivanju duljina cestovnih brojačkih odsječaka. U ovoj su publikaciji svi brojački odsječci definirani kao odsječci razvrstanih javnih cesta između susjednih račvališta s drugim razvrstanim javnim cestama ili, u slučajevima kad je brojačko mjesto smješteno pri graničnom prijelazu, graničnog prijelaza i račvališta s razvrstanom javnom cestom.

Pri utvrđivanju brojačkih mjesta i brojačkih odsječaka težilo se ostvarenju reprezentativnog uzorka brojačkih mjesta neprekidnoga i povremenoga automatskog brojenja prometa.

Na priloženom kartografskom prikazu pod nazivom *Prosječni godišnji dnevni promet na odabranim cestama u 2025. godini* (mjerilo 1:950.000) vidi se na koji je način promet nekog brojačkog mjesta pridružen cestovnim odsječcima.

Brojačko je mjesto određeno oznakom i nazivom. Na taj se način olakšava prepoznavanje izvora podataka. U ovoj se publikaciji koriste oznake brojačkih mjesta koje su po prvi puta uvedene u publikaciji s podatcima o prometu u 2003. godini. Dakle, svako brojačko mjesto označeno je četveroznamenkastim brojem, kojem odgovara i odabrani toponim.

Prva dva broja četveroznamenkaste oznake predstavljaju redni broj kvadranta zemljovida s tim da su granice kvadranta meridijani i paralele koji su razdvojeni za 30' zemljopisne dužine odnosno širine. Preostale dvije znamenke redni su broj brojačkog mjesta unutar kvadranta. Oznaka brojačkog mjesta ne sadrži naznaku načina brojenja prometa. Ovakvo označavanje korisnicima olakšava primjenu sve češće rabljenih računalnih GIS-aplikacija i pronalaženje brojačkih mjesta na zemljopisnim kartama te ostvaruje potrebnu nezavisnost od promjena u razvrstaju cesta. Postoji i zaliha brojčanih oznaka za brojačka mjesta koja će se uvesti u budućnosti.

I u naplatnom brojenju prometa vrijedi opisani opći sustav označavanja brojačkih mjesta, s time da se vodi računa o vrsti naplatne postaje, pa tako čelna naplatna postaja koja gradnjom autoceste postane bočna dobiva i novu brojčanu oznaku.

Od 2003. godine promijenjeni su i nazivi virtualnih brojačkih mjesta na cestovnim građevinama s naplatom prolaska vozila. Kako bi se što širem krugu korisnika olakšala uporaba podataka, nazivi virtualnih brojačkih mjesta za koje se predočuju podatci o prometu na pojedinim brojačkim odsječcima tih građevina određeni su nazivom naplatne postaje i

jednom od četiri glavne strane svijeta prema kojoj je, u odnosu na naplatnu postaju, usmjeren brojački odsječak. To se ne odnosi na naplatnu postaju *Rupa* (to brojačko mjesto i nije virtualno). Virtualno brojačko mjesto takvo je brojačko mjesto na kojem se podatci o prometu ne dobivaju s brojila prometa smještenog na pripadnoj brojačkoj dionici, već se izračunavaju na osnovu podataka s nekih drugih prikladnih brojačkih mjesta. Naziv brojačkog odsječka određen je prema krajnjim točkama, a ukupna duljina odsječka iskazuje se u kilometrima.

Za pojedino brojačko mjesto i njemu pripadajući brojački odsječak u pravilu su predočeni izračunani ili procijenjeni PGDP i PLDP, a tamo, gdje to nije bilo ili moguće ili potrebno, PDP. Podatak za mjesto neprekidnog ili naplatnog brojenja koji je procijenjen označen je plavom bojom, a ako se radi o PDP-u podatak je označen ljubičastom bojom, a svaku tablicu prate objašnjenja korištenih boja i oznaka. U tablici *3.1.* su podatci za državne ceste, u tablici *3.2*. za odsječke autocesta (prema Odluci o razvrstavanju javnih cesta i prema Pravilniku o označavanju autocesta, njihove stacionaže, brojeva izlaza i prometnih čvorišta i odmorišta – NN 73/2003), u tablici *3.3.* za županijske ceste, a u tablici *3.4.* za lokalne i tri nerazvrstane ceste. Tablice sadrže i podatke o načinu brojenja, te o nazivima i duljinama brojačkih odsječaka.

Podatci su u tablicama u ovom poglavlju poredani prema rastućem broju (oznaci) ceste i poziciji brojačkog mjesta na dotičnoj cesti, sukladno njenu opisu (nazivu).

Kao i u svim do sada izdanim publikacijama serije *Brojenje prometa na cestama Republike Hrvatske,* utvrđena je pripadnost svakog brojačkog mjesta i pripadajućeg brojačkog odsječka razvrstanim javnim cestama u skladu s važećim odlukama o razvrstavanju javnih cesta.

Kad spominjemo Odluku o razvrstavanju javnih cesta, nije naodmet podsjetiti i na definicije autoceste i brze ceste (temeljem Zakona o sigurnosti prometa na cestama, NN 67/2008). Autocesta je definirana kao javna cesta posebno izgrađena i namijenjena isključivo za promet motornih vozila, koja ima dvije fizički odvojene kolničke trake (zeleni pojas, zaštitnu ogradu i sl.) za promet iz suprotnih smjerova sa po najmanje dvije prometne trake širine najmanje 3,5 m, a s obzirom na konfiguraciju terena – i po jednu traku za zaustavljanje vozila u nuždi širine najmanje 2,5 m, bez raskrižja s poprečnim cestama i željezničkim ili tramvajskim prugama u istoj razini, u čiji se promet može uključiti, odnosno isključiti samo određenim i posebno izgrađenim priključnim prometnim trakama za ubrzavanje ili usporavanje, odnosno priključnim rampama, kojom je omogućen siguran prometni tok vozila brzinom od najmanje 80 km/h i koja je kao autocesta označena propisanim prometnim znakom. Brza cesta je javna cesta rezervirana za promet isključivo motornih vozila, koja ima sva raskrižja s drugim prometnicama u dvije ili više razina, ima jedan ili dva razdvojena kolnička traka, u pravilu nema zaustavnih trakova i kao takva je označena propisanim prometnim znakom.

PGDP I PLDP SA STRUKTURAMA PO VRSTAMA I SKUPINAMA VOZILA

4. DRŽAVNE CESTE I AUTOCESTE: PGDP i PLDP SA STRUKTURAMA PO VRSTAMA I SKUPINAMA VOZILA

Budući da je često nedovoljno poznavati samo PGDP i PLDP bez spoznaja o strukturi prometa, u ovom se poglavlju predočuju podatci o PGDP-u i PLDP-u po vrstama i skupinama vozila. Uz podatke u apsolutnim iznosima, sustavno su po brojačkim mjestima predočeni i postotni udjeli pojedinih vrsta ili skupina vozila. Razvrstanost ovih podataka u pojedine tablice uvjetovana je načinima brojenja i mogućnostima mjernih uređaja glede razvrstavanja izbrojenih vozila.

Unutar tablica podatci o PGDP-u i PLDP-u poredani su prema rastućoj oznaci ceste i, dodatno, prema poziciji (slijedu) brojačkog mjesta na dotičnoj cesti. Struktura prometa na naplatnim odsječcima autocesta također je predočena po rastućoj oznaci cesta.

Grafikoni kojima je za pojedino brojačko mjesto predočena promjena PGDP-a i PLDP-a u posljednjih pet godina, pridruženi su tablicama. Takvi prikazi pružaju osnovnu informaciju o promjenama u prometu na brojačkim mjestima.

Prenosiva automatska brojila s mogućnošću razvrstavanja prebrojenih vozila u razrede duljina programirana su tako, da vozila razvrstavaju u pet skupina odnosno razreda duljina. Ti su razredi navedeni u tablici *4.1.1.*

S obzirom na to da navedena brojila vozila razvrstavaju prema njihovim duljinama, ne može se točno utvrditi koje su vrste prebrojena vozila, ali može se, na osnovi provedenih statističkih analiza, reći koja su vozila najzastupljenija u svakom od razreda. Tako su u I. razredu duljina najzastupljeniji osobni automobili, najčešće čineći preko 95% vozila. U II. razredu duljina najzastupljenija su laka teretna i kombinirana vozila, ali u taj razred pripada i dio srednje teških teretnih vozila (laka teretna i kombinirana vozila u odnosu na srednje teška teretna vozila zastupljena su, ugrubo, u omjeru 3:1). U III. razredu duljina najzastupljenija su srednje teška teretna vozila i autobusi (prema gruboj procjeni, unutar ove skupine, srednje teška teretna vozila prema autobusima zastupljena su u omjeru 2,5:1). U IV. razredu duljina dominiraju teška teretna vozila bez prikolica (prema gruboj procjeni, u ovoj su skupini navedena vozila zastupljena preko 90%), a u V. su razredu duljina najzastupljenija teška teretna vozila s prikolicama i tegljači s poluprikolicama (također prema gruboj procjeni, preko 90%). Tegljače s poluprikolicama, kao granični slučaj, brojila mogu manjim dijelom svrstati i u četvrtu skupinu.

U sustavu neprekidnog automatskog brojenja prometa u Hrvatskoj se koristi stacionarno automatsko brojilo tipa *QLD-6CX nano.* U tablici *4.1.2.* predočeno je kako ta brojila razvrstavaju vozila u skupine vozila.

Brojila *QLD-6CX nano* mogu ispravno razvrstavati i ona vozila koja se trakom voze u suprotnom smjeru pa nemaju posebnu skupinu za ta vozila, kao što su to imala brojila ranijih generacija. Brojila u skupinu *C2*

Tablica 4.1.1. Razredi duljina vozila prenosivih automatskih brojila

Razred duljina	Opis vozila u razredu
I.	vozila duljine do 5,5 m
II.	vozila duljine preko 5,5 do 9,1 m
III.	vozila duljine preko 9,1 do 12,2 m
IV.	vozila duljine preko 12,2 do 16,5 m
V.	vozila dulja od 16,5 m

Tablica 4.1.2. Skupine vozila stacionarnih brojila *QLD-6CX nano*

Skupina	Opis vozila u skupini
A1	motocikli
A2	osobna vozila sa ili bez prikolice
A3	kombi-vozila sa ili bez prikolice
B1	manja teretna vozila
B2	srednja teretna vozila
B3	teška teretna vozila
B4	teška teretna vozila s prikolicom
B5	tegljači
C1	autobusi

razvrstavaju gradske (zglobne) autobuse. Kako je takvih autobusa na brojačkim mjestima, koja se gotovo sva nalaze izvan područja većih gradova, izuzetno malo, ta se skupina za sada u objavljenim rezultatima ne prikazuje zasebno.

Na cestovnim građevinama s naplatom prolaska vozila provodi se naplatno brojenje, koje vozila razvrstava u posebne skupine vozila. Naplatne skupine određene su Pravilnikom o cestarini (NN 103/13), a opisane su u tablici *4.1.3.*

Osim ovih skupina postoji i skupina vozila oslobođenih plaćanja korištenja cestovnih građevina, ili se njihov prolazak posebno naplaćuje (skupina IX). U publicirane podatke za godinu 2025., kao i u izračune PGDP-a, PDP-a i PLDP-a više nije uključen promet IX. skupine vozila. Podatke za ovu skupinu vozila tvrtke koje provode naplatu više ne dostavljaju.

Za naplatne postaje tablicama su prikazani podatci o ukupnom prometu vozila po skupinama i mjesecima te PGDP i PLDP, također po skupinama vozila. Od 2009. godine u naplatno brojenje uvedena je i zasebna naplatna skupina IA, u kojoj se nalaze vozila s osobinama motocikla, motornog tricikla i četverocikla.

Podatci prikupljeni naplatnim brojenjem zahtijevaju posebnu metodologiju obrade. S obzirom na uočene pogrešne interpretacije podataka kod manje upućenih korisnika, naglašavamo da postoji bitna razlika između prometa na naplatnim postajama i prometa na odsječcima (tj. između pojedinih naplatnih postaja) cestovnih građevina s naplatom prolaska vozila. Podatci o prometu na odsječcima posebno se izračunavaju iz podataka prikupljenih na naplatnim postajama matričnim računom te su to izvedeni podatci (osim za čelne naplatne postaje i njima pripadajuće cestovne odsječke).

Grafički prikazi autocesta sa zatvorenim sustavima naplate prikazuju PGDP za odsječke autocesta, uključujući i promet na ulazno-izlaznim naplatnim postajama i priključnim dionicama, po smjerovima i ukupno.

Tablica 4.1.3. Naplatne skupine vozila

Skupina	Opis vozila u skupini
IA.	motocikli, motorni tricikli i četverocikli
I.	motorna vozila s dvije osovine, visine do 1,90 m
II.	a) motorna vozila s dvije osovine visine iznad 1,90 m, kojima najveća dopuštena masa ne prelazi 3500 kg b) motorna vozila s dvije osovine, visine ispod 1,90 m, koja vuku priključno vozilo, neovisno o broju osovina i visini priključnog vozila
III.	a) motorna vozila s dvije ili tri osovine, najveće dopuštene mase preko 3500 kg b) motorna vozila s dvije osovine, najveće dopuštene mase preko 3500 kg, koja vuku priključno vozilo s jednom osovinom c) motorna vozila iz II a) koja vuku priključno vozilo, neovisno o broju osovina priključnog vozila
IV.	a) motorna vozila s četiri ili više osovina, najveće dopuštene mase preko 3500 kg b) motorna vozila s dvije osovine, najveće dopuštene mase preko 3500 kg, koja vuku priključno vozilo s dvije i više osovine c) motorna vozila s tri osovine, najveće dopuštene mase preko 3500 kg, koja vuku priključno vozilo, neovisno o broju osovina priključnog vozila

PO VRSTAMA VOZILA

5. ŽUPANIJSKE I LOKALNE CESTE: PGDP I PLDP SA STRUKTURAMA PO VRSTAMA VOZILA

U ovom su poglavlju po vrstama vozila predočeni podatci o PGDP-u i PLDP-u prikupljeni s brojačkih mjesta neprekidnog automatskog brojenja na županijskim, lokalnim i nerazvrstanim cestama. Tablica *5.1.* prikazuje obrađene podatke prikupljene na mjestima neprekidnog brojenja na županijskim cestama, a tablica *5.2.* na mjestima smještenim na lokalnim cestama i jednoj nerazvrstanoj. Lokacija neprekidnog automatskog brojenja koja se nalazi na nerazvrstanoj cesti je Velika Mlaka. Radi se o brojačkom mjestu koje je inicijalno bilo uspostavljeno na razvrstanoj cesti, ali aktualnom odlukom o razvrstaju cesta sada pripada nerazvrstanoj cesti.

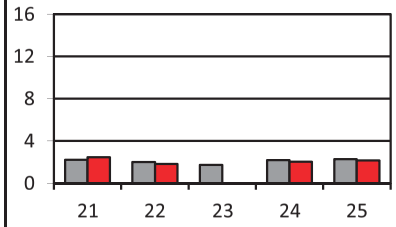

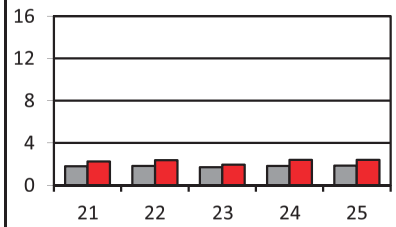

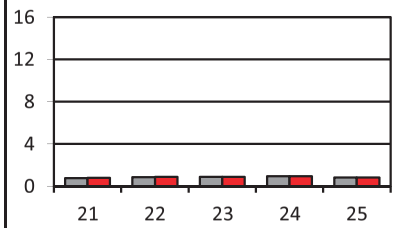

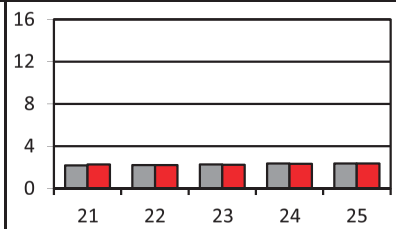

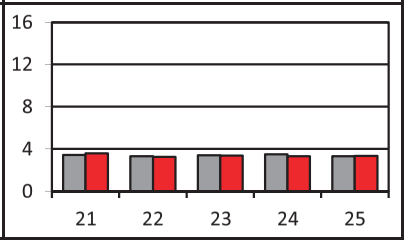

Ovo poglavlje sadrži podatke samo o prometu s brojačkih mjesta neprekidnog brojenja jer se povremeno brojenje na županijskim, lokalnim i nerazvrstanim cestama izvršava na način koji ne omogućuje prikaz strukture prometa po skupinama.

Podatci su predočeni u apsolutnim i postotnim iznosima prema rastućem broju oznake ceste.
S obzirom na nastojanje "Hrvatskih cesta d.o.o." da upotpune spoznaje o prometu na državnim cestama, koje su u nadležnosti te tvrtke, tijekom 2003. godine započelo je napuštanje brojačkih mjesta automatskog brojenja na županijskim cestama. Oprema kojom je do tada brojeno na županijskim cestama korištena je na novouvedenim mjestima automatskog brojenja na državnim cestama. Zadnjih godina porastao je broj brojačkih mjesta na županijskim cestama zahvaljujući programu nabavljanja automatskih brojila prometa kojeg su provele županijske uprave za ceste, a od 2015. godine to je rezultat projekta u sklopu kojeg su Hrvatske ceste pokrenule i provele postupak nabave i instalacije 165 novih automatskih stacionarnih brojila prometa namijenjenih uspostavi brojačkih mjesta na županijskim i lokalnim cestama. Instaliranje ove grupe brojila dovršeno je tijekom prve polovine 2016. godine.

Struktura prometa vozila na županijskim cestama prikazana u tablicama istovjetna je strukturi prometa vozila prema skupinama korištenoj u predočavanju podataka s brojačkih mjesta na državnim cestama (vidjeti poglavlje 4. i tablicu 4.1.2.).

PRIJEVOZ VOZILA TRAJEKTNIM LINIJAMA

6

6. PRIJEVOZ VOZILA TRAJEKTNIM LINIJAMA

Izabrani rezultati obrade podataka o prijevozu cestovnih motornih vozila na domaćim morskim trajektnim linijama u 2025. godini uobičajeno su predstavljeni po trajektnim linijama. Prikupljeni su i obrađeni podatci s **24** linije. U 2025. godini sve su linije prometovale s cjelogodišnjim voznim redom. Rezultati su prikazani po vrstama vozila, pojedinačno za svaku trajektnu liniju.

Prikaz podataka uvjetovan je načinom njihova prikupljanja u brodarskim tvrtkama koje trajektne linije održavaju. Stoga se razlikuju sljedeće vrste vozila prevezenih trajektima:

– osobna vozila

– autobusi

– kamioni i prikolice

– ostala cestovna vozila.

Izračunan je PGDP i PLDP za svaku trajektnu liniju, kao i postotni udjeli pojedinih vrsta vozila u PGDP-u i PLDP-u.

Tablica *6.1.* sadrži podatke o PGDP-u i PLDP-u po vrstama vozila za svaku aktivnu trajektnu liniju u 2025. godini. Redoslijed trajektnih linija u tablici približno slijedi njihov zemljopisni položaj od zapada prema istoku.

ODABRANI PODATCI O PROMETU NA MJESTIMA AUTOMATSKOG BROJENJA

7

7. ODABRANI PODATCI O PROMETU NA MJESTIMA AUTOMATSKOG BROJENJA

Detaljima bogati prikupljeni podatci neprekidnog automatskog brojenja prometa predmet su složenih obrada i analiza. Dio tih obrada i analiza predočen je u ovom poglavlju u obliku grafikona koji detaljno oslikavaju karakteristike prometa brojačkih mjesta neprekidnog automatskog brojenja prometa. Predočeni su izabrani rezultati za **611** brojačkih mjesta, smještenih većinom na državnim cestama (**389**), ali i županijskim cestama (**198**), lokalnim cestama (**23**) i nerazvrstanim cestama (**jedno**). Brojačka su mjesta označena oznakama uvedenim početkom 2004. godine. Te su oznake prvi puta objavljene u publikaciji brojenja prometa s podatcima za 2003. godinu.

Brojačka su mjesta poredana prema rastućoj oznaci ceste i, dodatno, prema poziciji (slijedu) brojačkog mjesta na dotičnoj cesti. Redom su navedena brojačka mjesta na državnim cestama, županijskim, lokalnim i nerazvrstanim cestama.

Značajke prometa svakog brojačkog mjesta predočene su u osam grafikona. Prvim grafikonom naziva “Dnevni promet u 2025. godini” prikazan je promet tijekom svakoga dana kroz godinu. Na grafikonu se vidi i kad podataka za neko razdoblje nema. Često se radi o slučajevima kada je zbog obnove prometnice ili nekog drugog tehničkog razloga bilo potrebno zamijeniti induktivne petlje u kolniku. Na istom je grafikonu prikazan i PGDP iskazan u stvarnim vozilima. Grafikon 2. prikazuje satnu raspodjelu prometnog toka. Za potrebe ovog grafikona izračunan je postotni udjel u PGDP-u za svaki sat izbrojenog prometa. Sati su zatim grupirani u postotne razrede koji su grafički predočeni.

Grafikon 3. prikazuje prosječni satni promet po pojedinim satima u danu. Iz navedenog je grafikona vidljiv prosječni satni promet iskazan u broju vozila (u danu) kroz godinu, ljeto (mjesece srpanj i kolovoz) te izvanljetno razdoblje. Grafikonom 4. predočeni su podatci o prosječnom satnom prometu u tjednim danima tijekom godine, ljeta te za izvanljetno razdoblje.

Ostali grafikoni prikazuju raspodjelu zabilježenih satnih prometa po četiri različite osnove. U grafikonu 5. svi su zabilježeni satni prometi prikazani po rangu, a njihova je vrijednost iskazana kroz postotni udjel u PGDP-u. Posljednja tri grafikona prikazuju satnu raspodjelu 200 registriranih vršnih sati po satima u danu (grafikon 6.), po danima u tjednu (grafikon 7.) i po mjesecima u godini (grafikon 8.).

Uz grafikonima predočene detaljne značajke prometa brojačkih mjesta neprekidnog automatskog brojenja prometa valja istaknuti i sljedeće napomene:

- "ljeto" obuhvaća mjesece srpanj i kolovoz;
- "izvanljeto" obuhvaća preostalih deset mjeseci (sve osim srpnja i kolovoza);
- grafikoni, u načelu, sadrže samo stvarno prikupljene podatke; kada su za neki smjer nedostajali podatci, u pojedinim su slučajevima oni procijenjeni temeljem odgovarajuće metodologije i interpolirani radi daljnje obrade;
- procijenjeni PGDP prikazan je plavom bojom;
- tamo gdje nije bilo dovoljno podataka za procjenu PGDP-a, ili gdje se promet nije odvijao tijekom cijele godine, iskazan je PDP i prikazan je ljubičastom bojom.

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

AB 3520, Velika

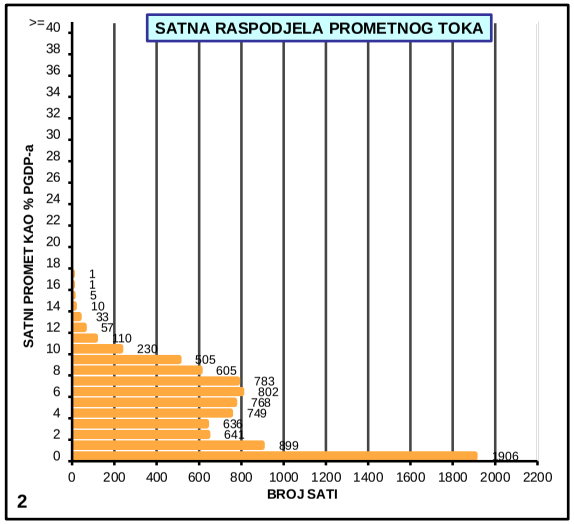

Godina: 2025.

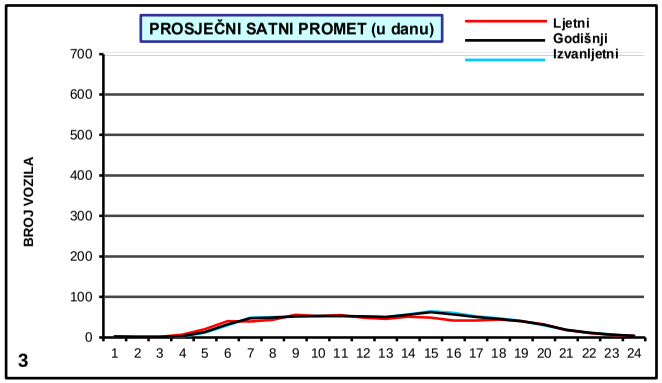

Broj ceste: L 41077

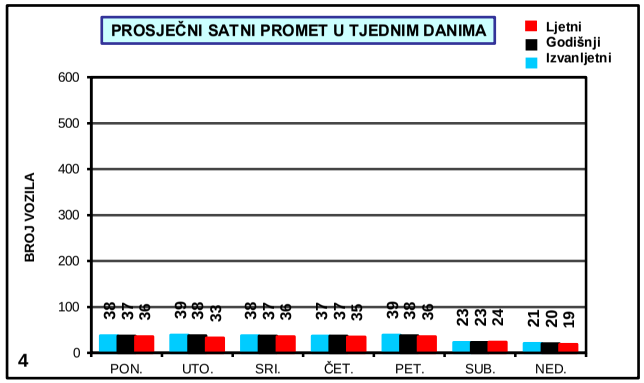

Napomene:

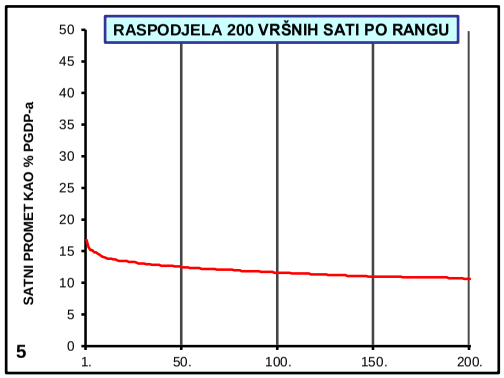

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

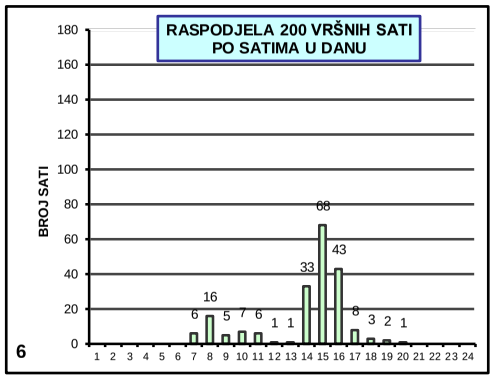

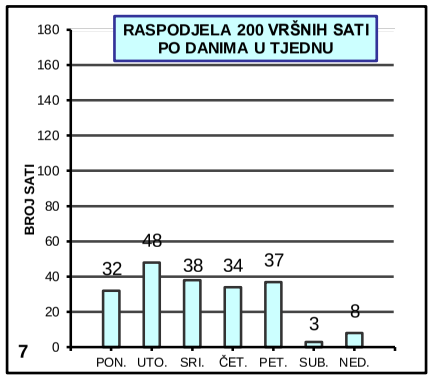

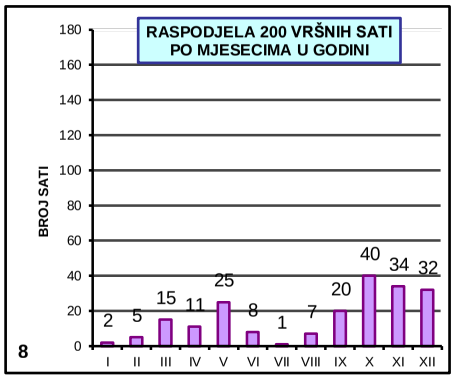

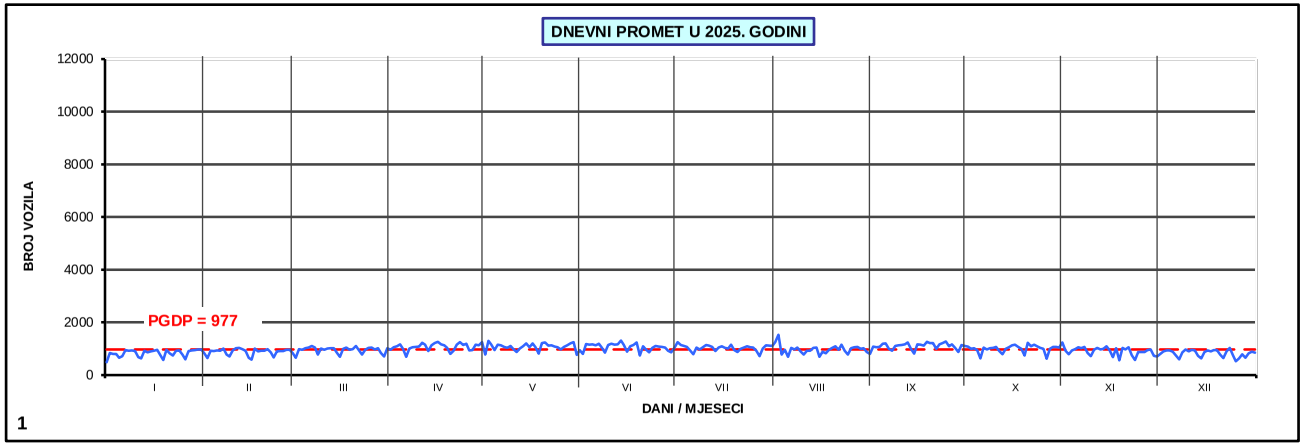

AB 3726, Silaš

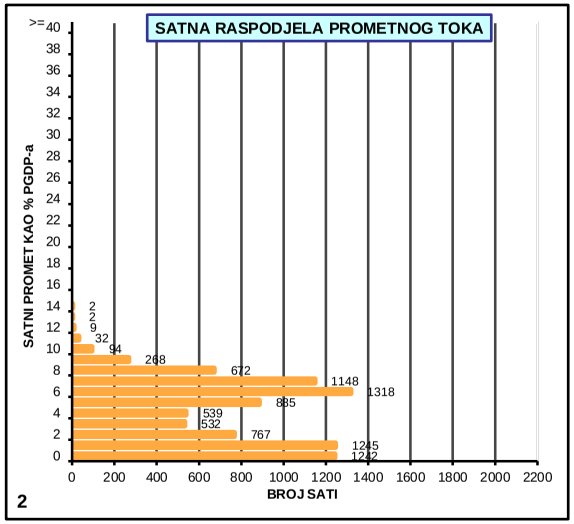

Godina: 2025.

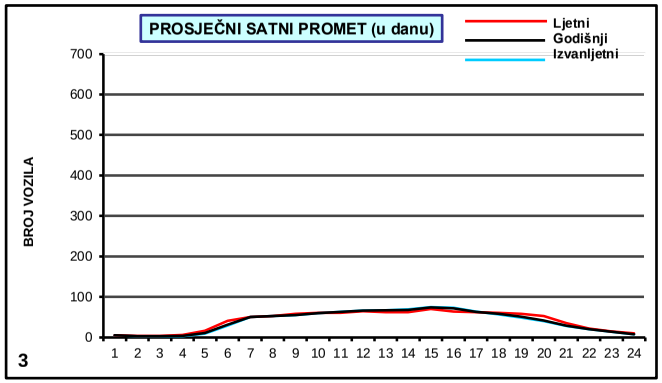

Broj ceste: L 44083

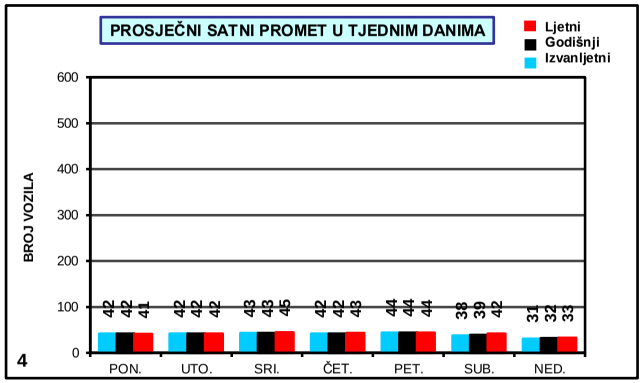

Napomene:

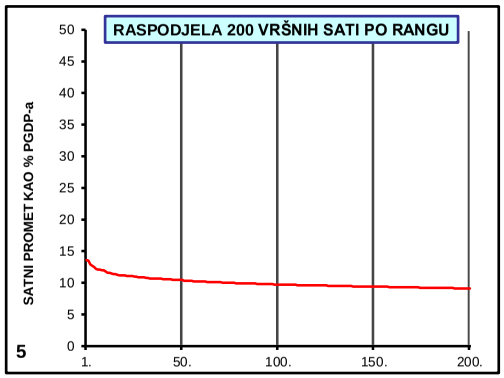

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

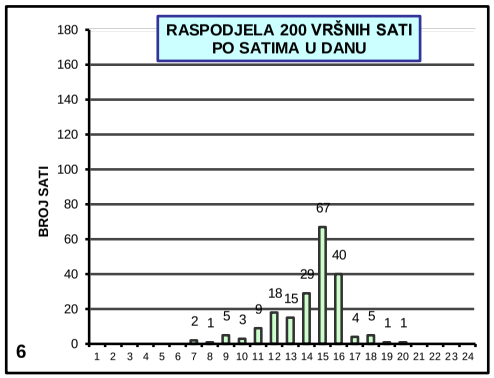

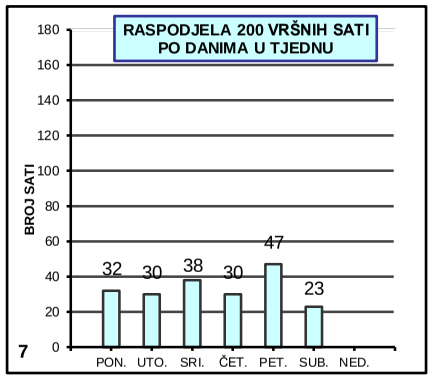

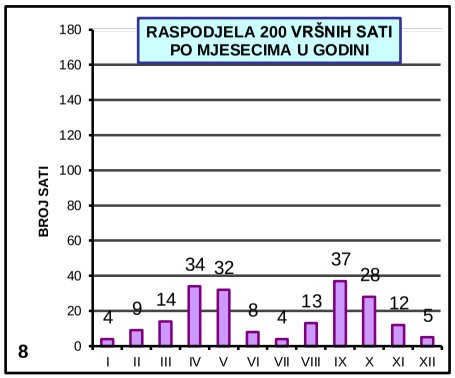

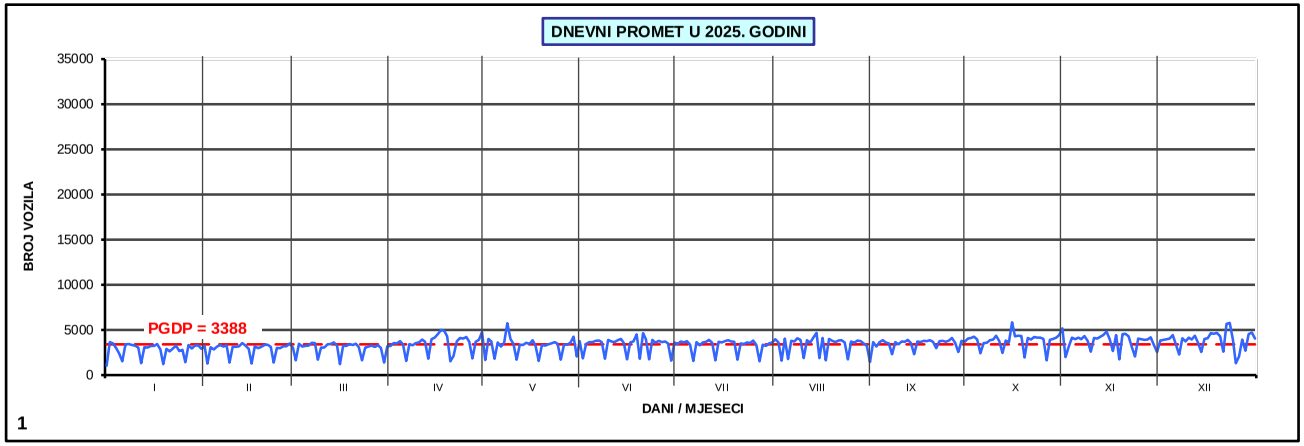

AB 3732, Županja - sjever

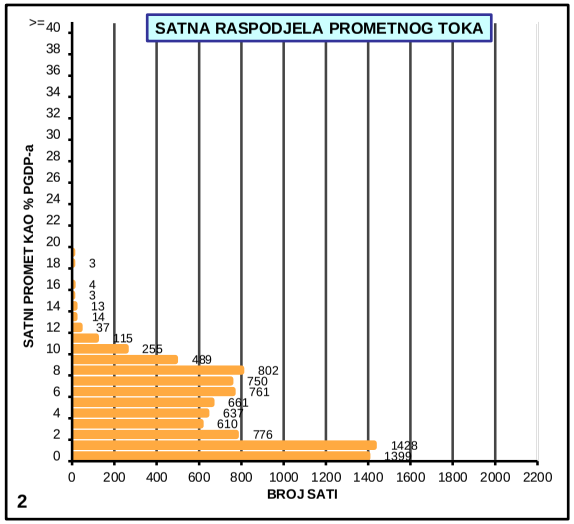

Godina: 2025.

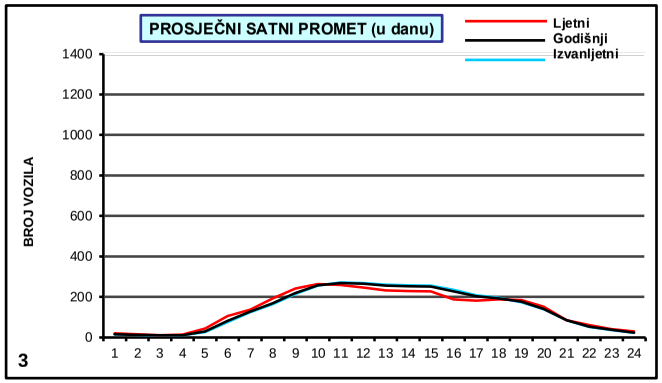

Broj ceste: L 46042

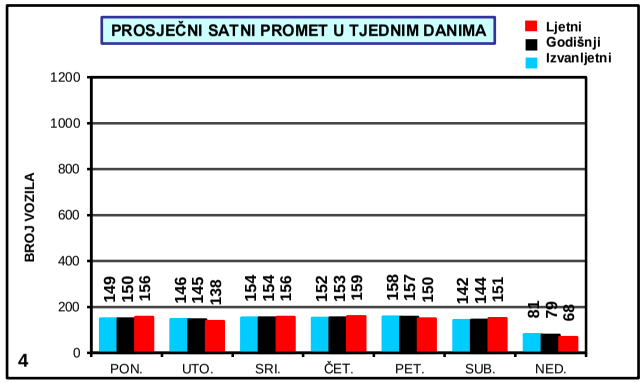

Napomene:

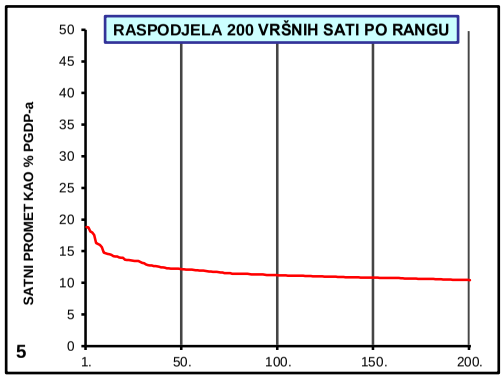

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

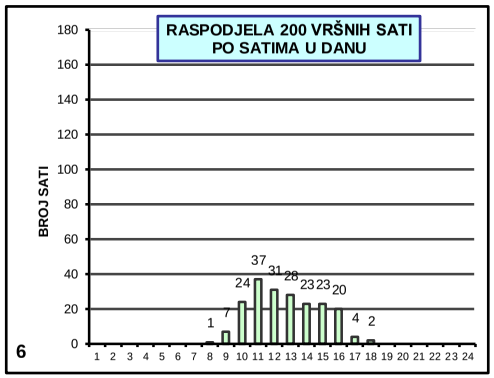

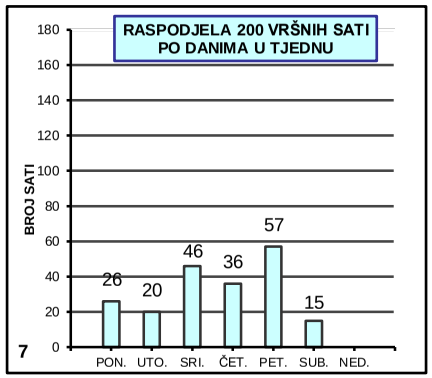

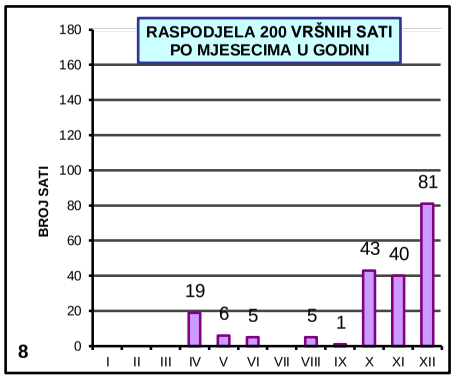

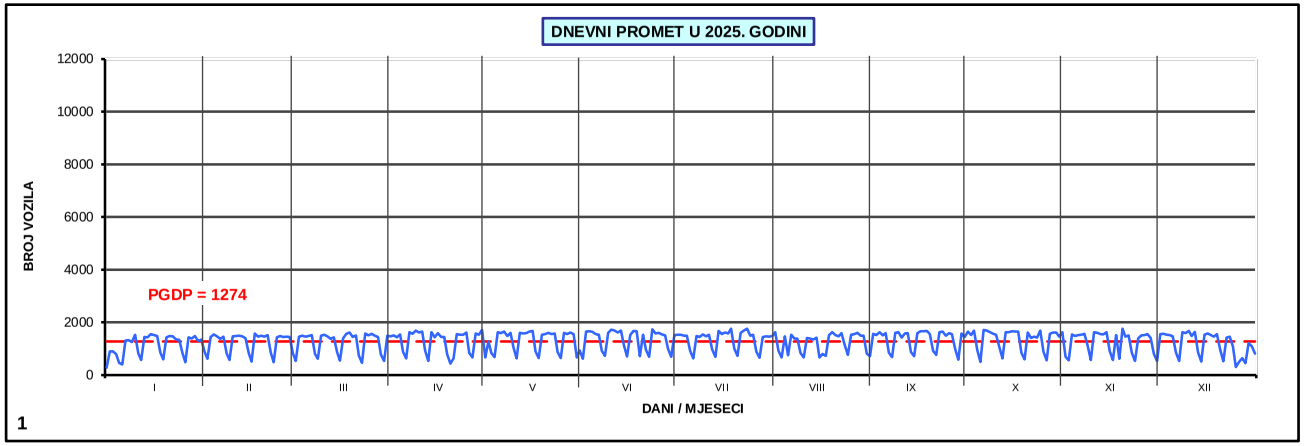

AB 2836, Tupljak

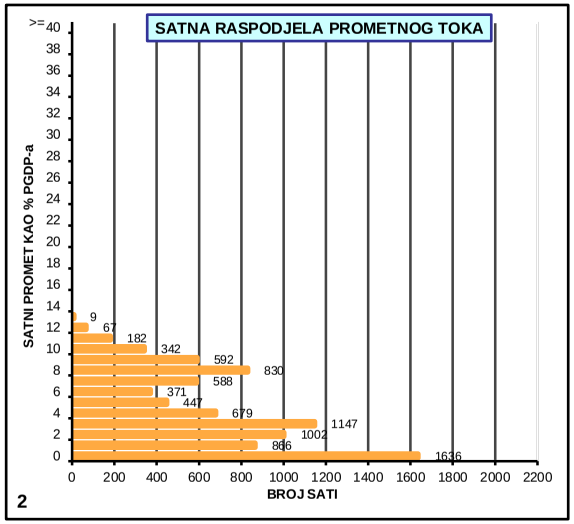

Godina: 2025.

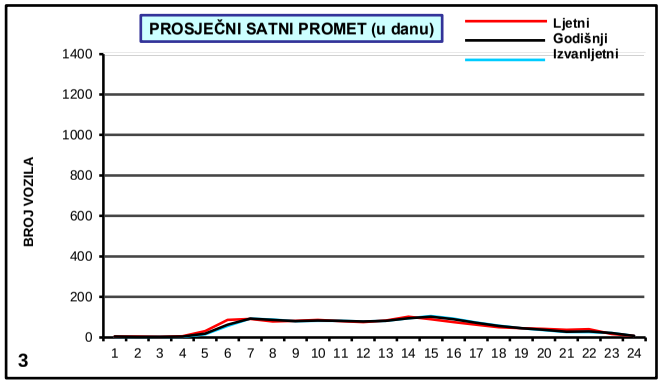

Broj ceste: L 50120

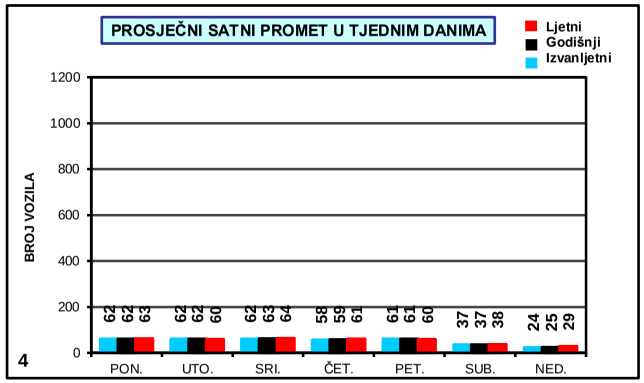

Napomene:

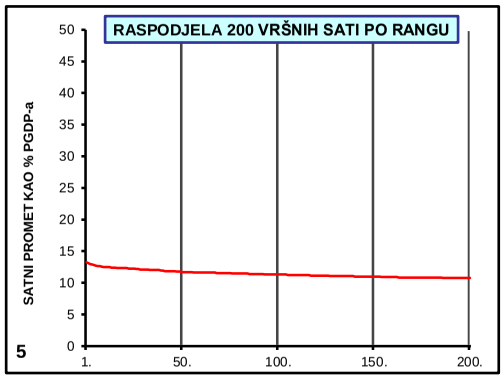

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

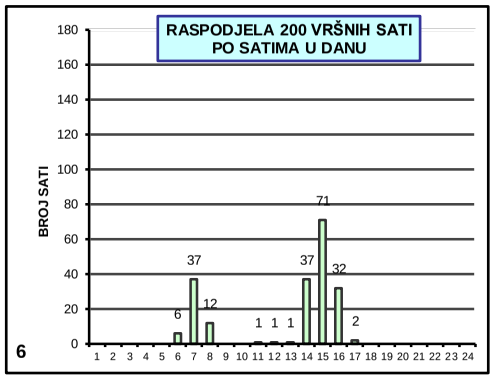

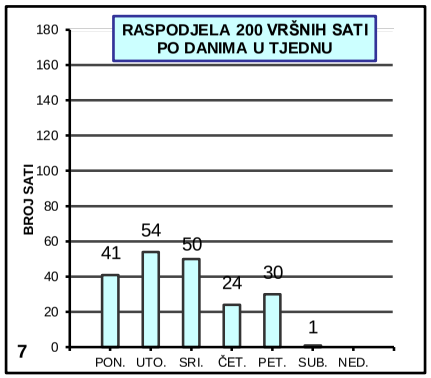

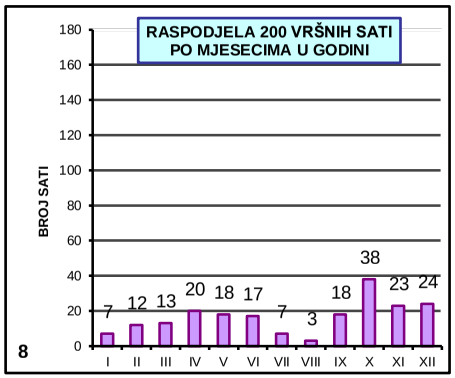

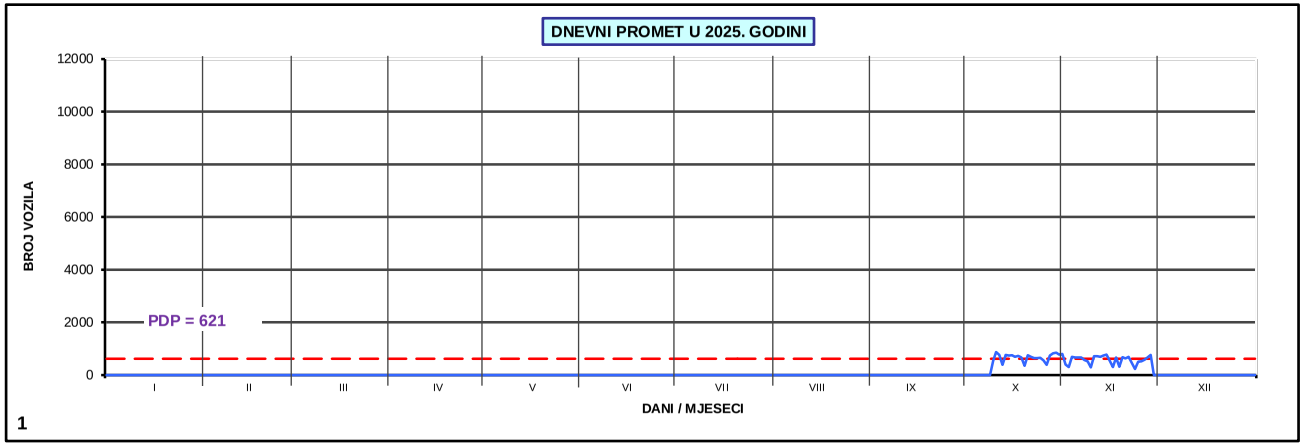

AB 4005, Nerezine

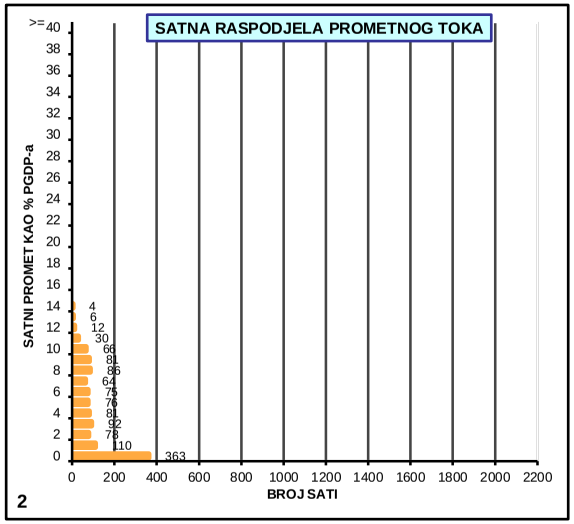

Godina: 2025.

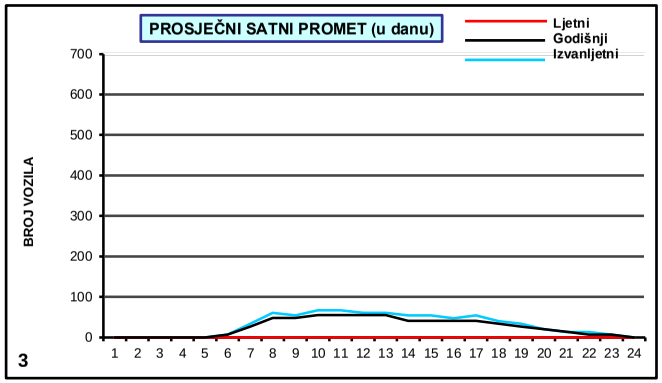

Broj ceste: L 58115

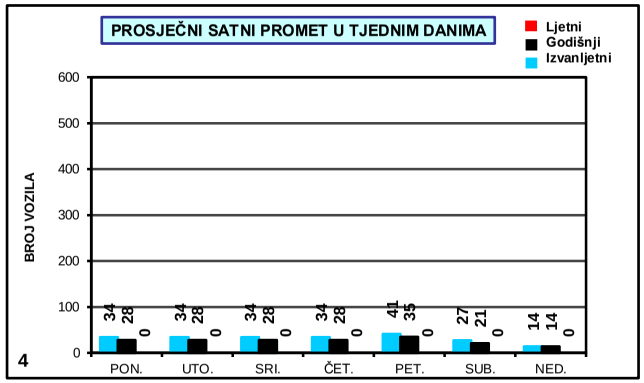

Napomene:

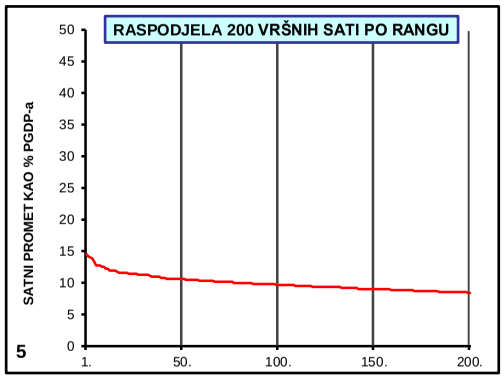

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

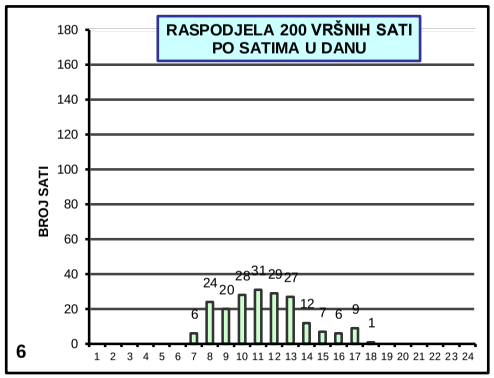

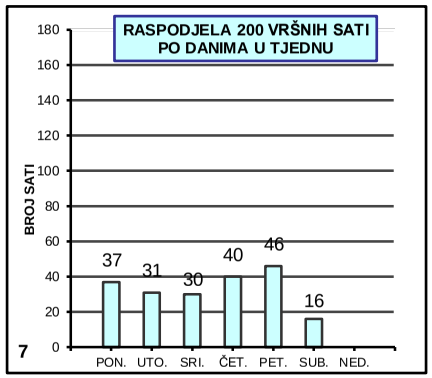

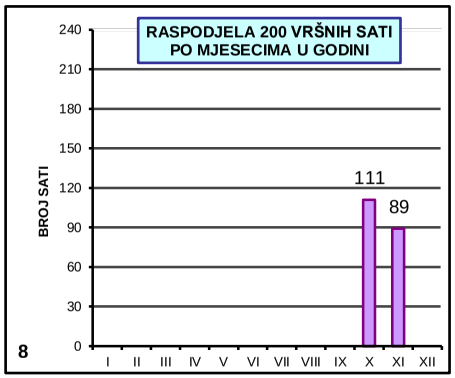

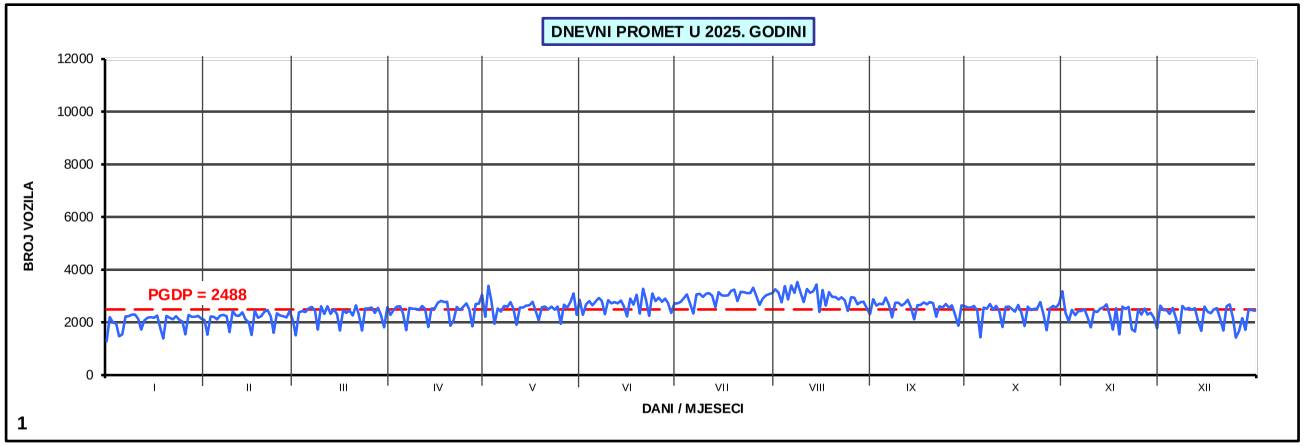

AB 4111, Senj

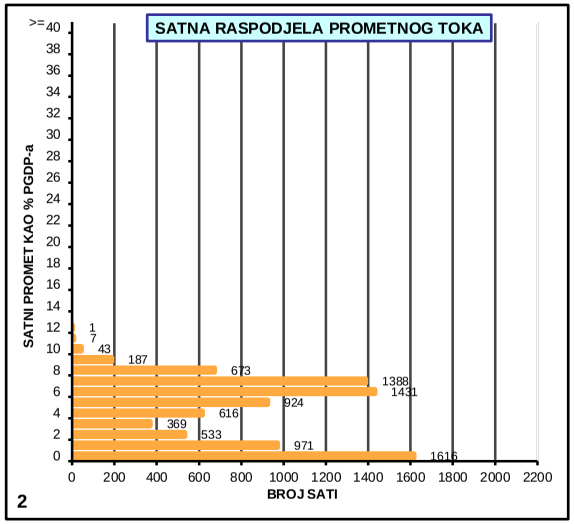

Godina: 2025.

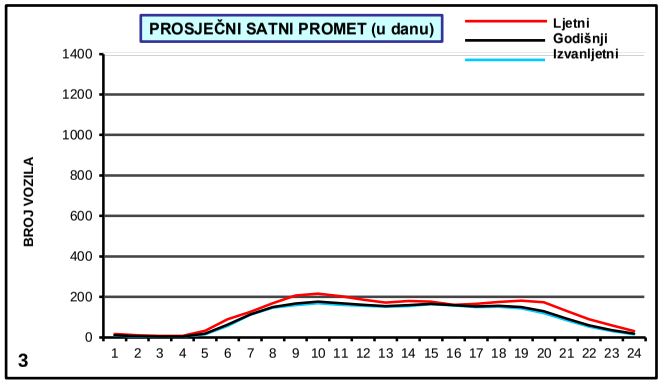

Broj ceste: L 59001

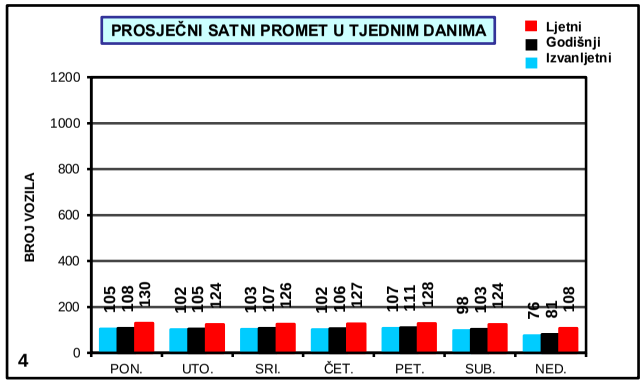

Napomene:

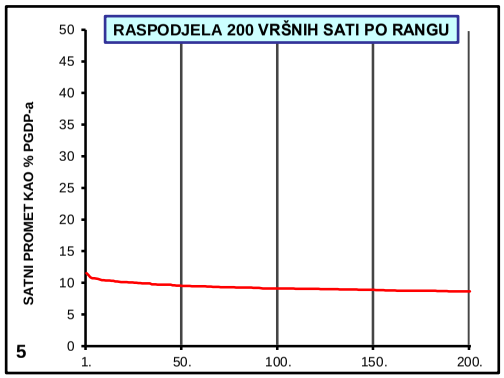

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

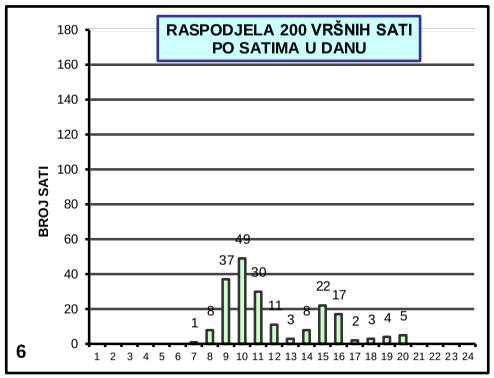

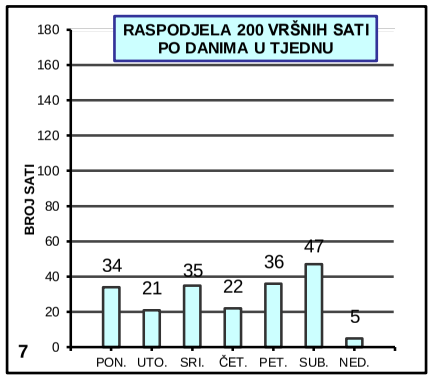

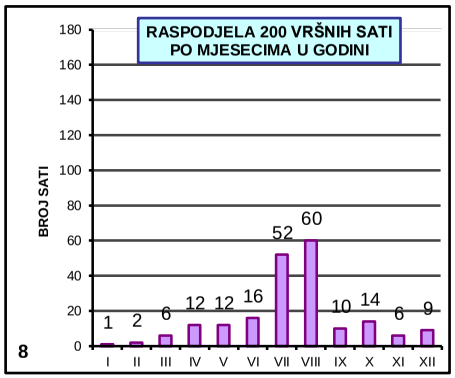

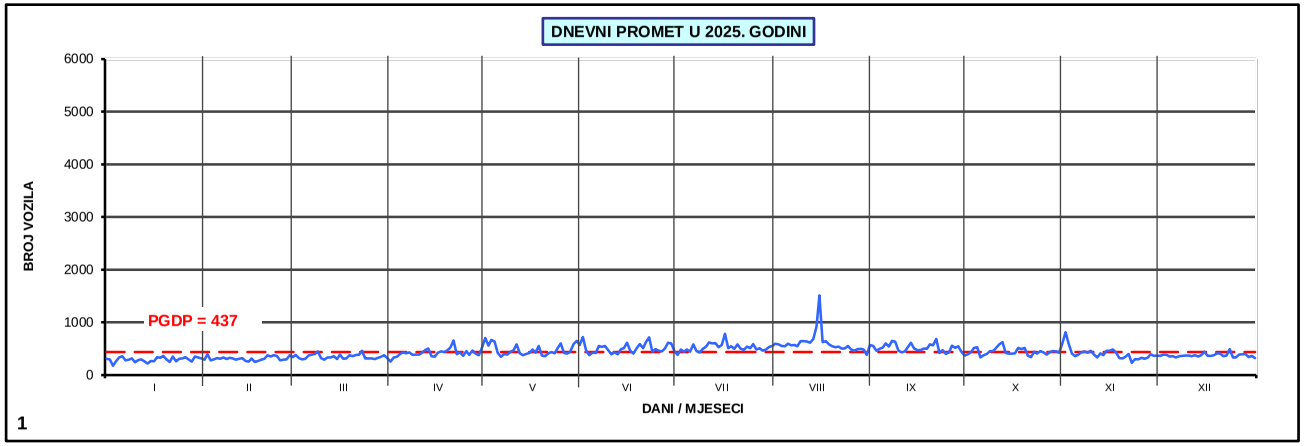

AB 4224, Kompolje

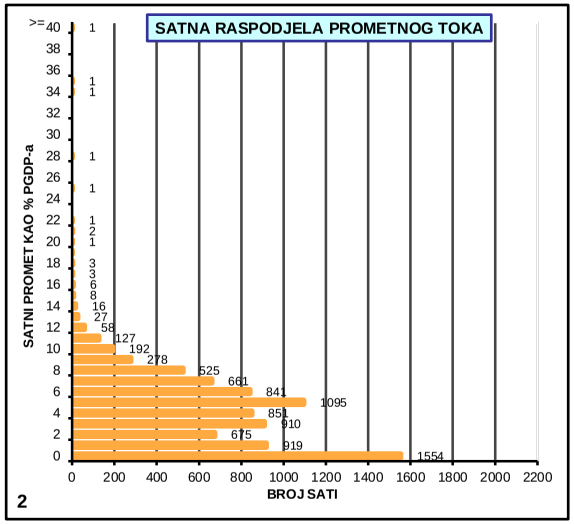

Godina: 2025.

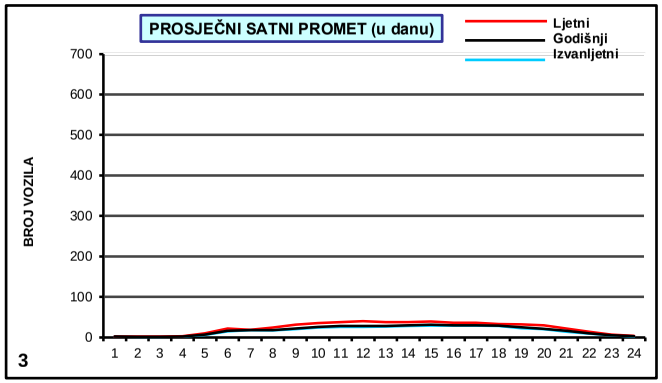

Broj ceste: L 59019

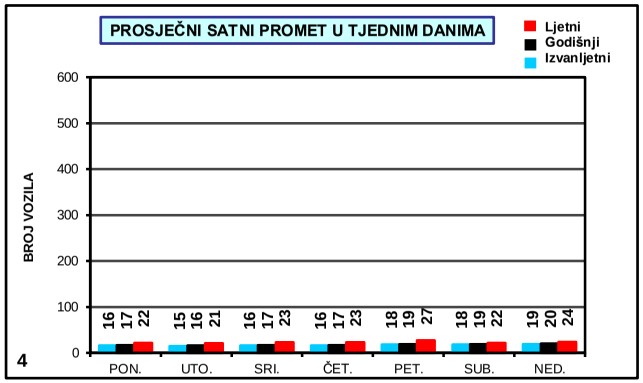

Napomene:

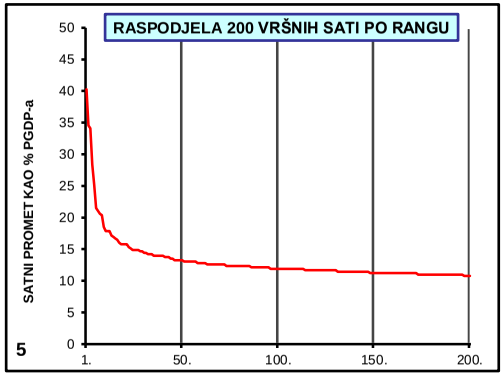

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

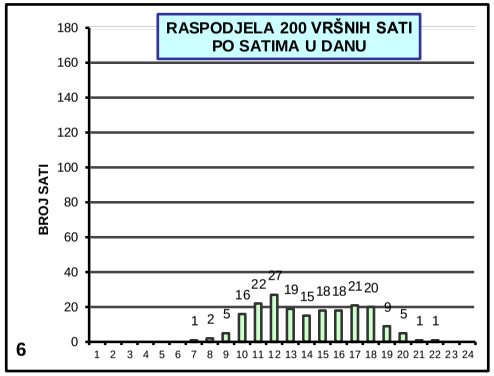

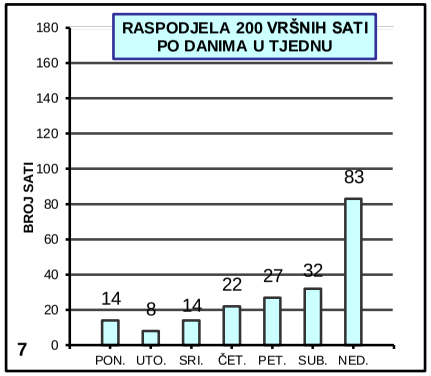

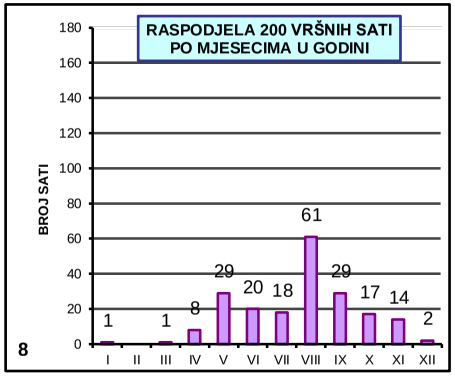

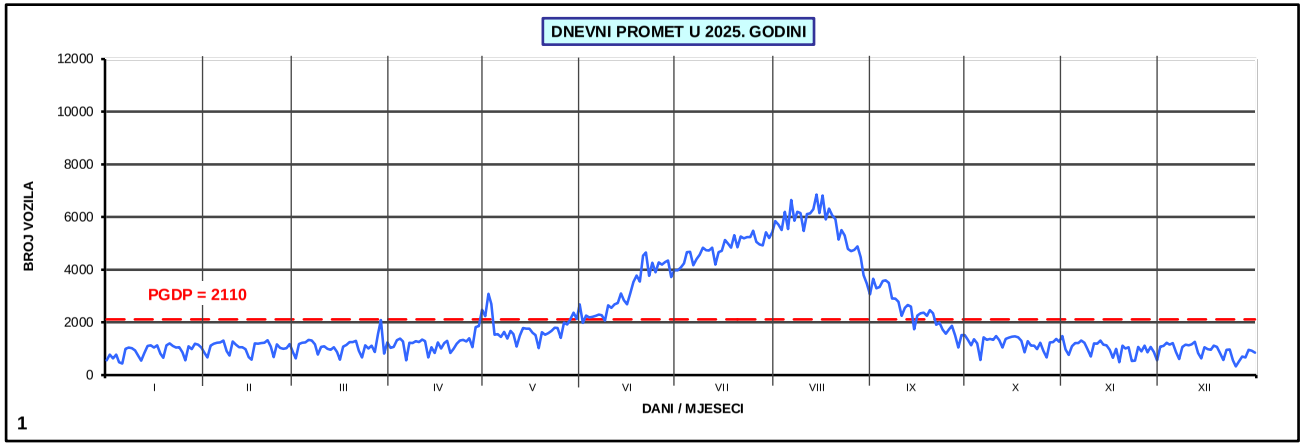

AB 4109, Caska

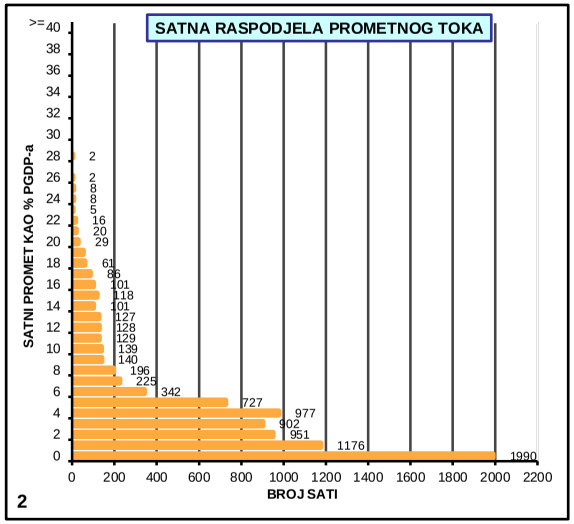

Godina: 2025.

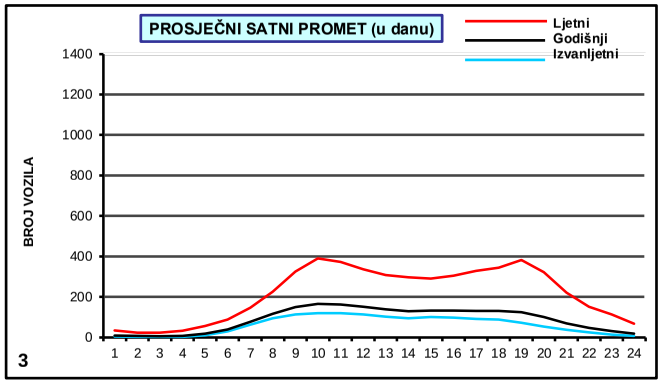

Broj ceste: L 59077

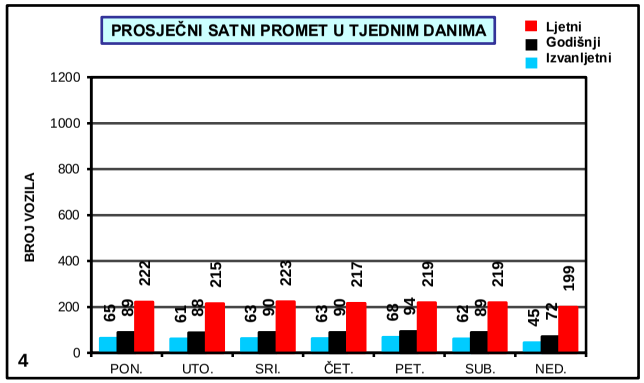

Napomene:

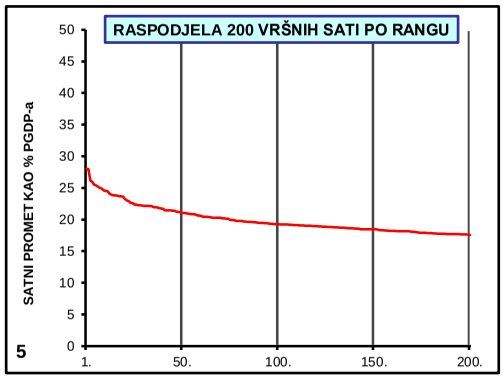

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

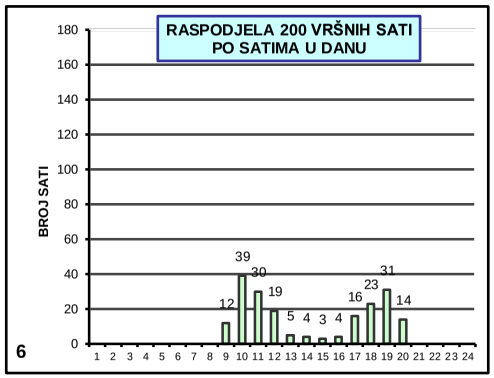

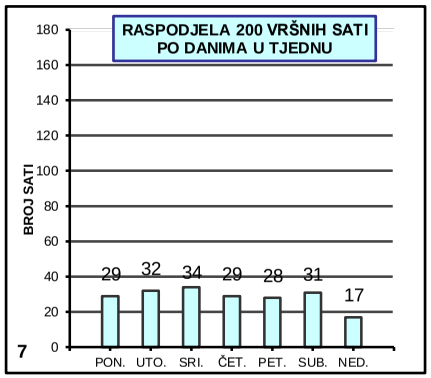

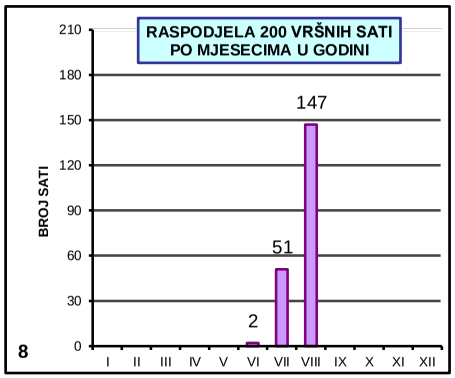

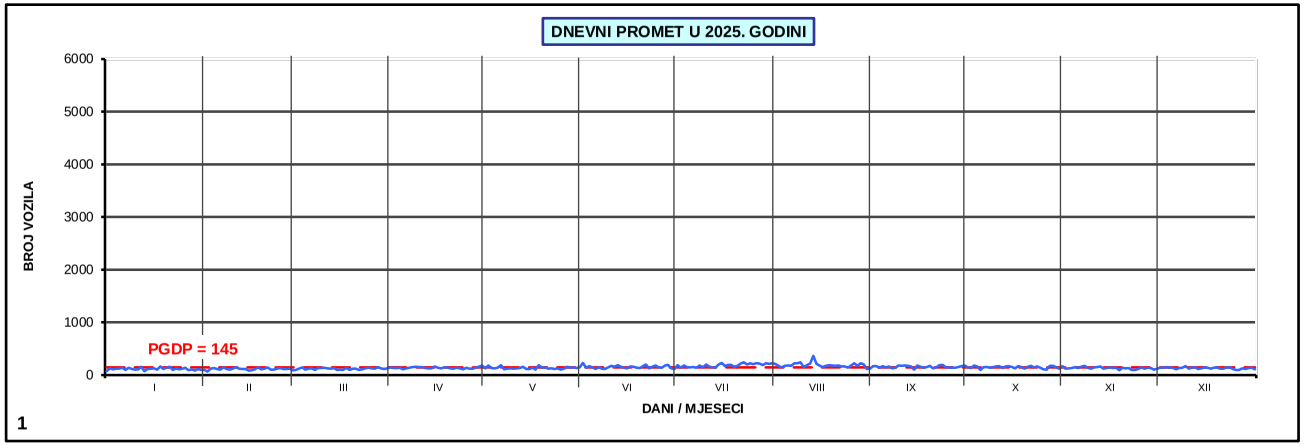

AB 5008, Kruškovače

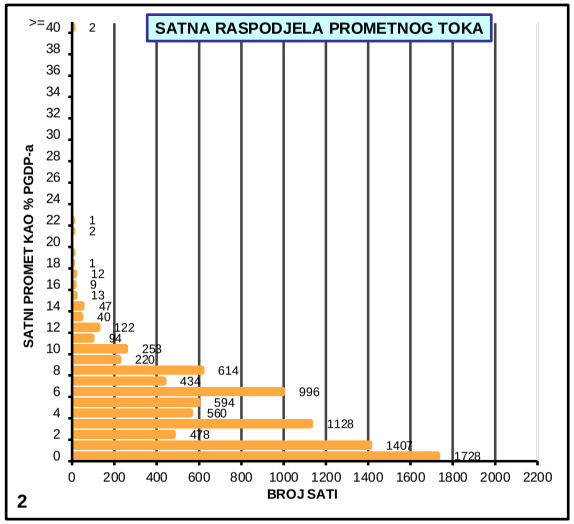

Godina: 2025.

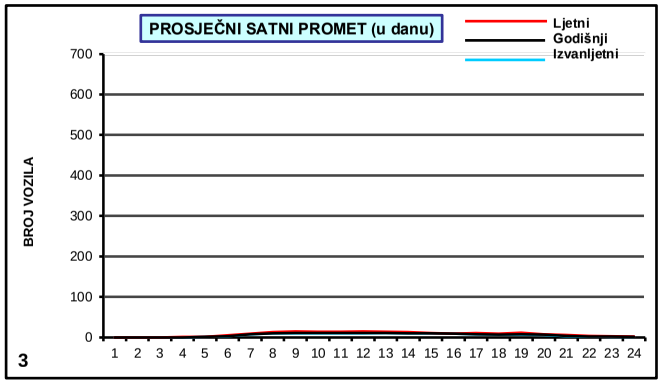

Broj ceste: L 63013

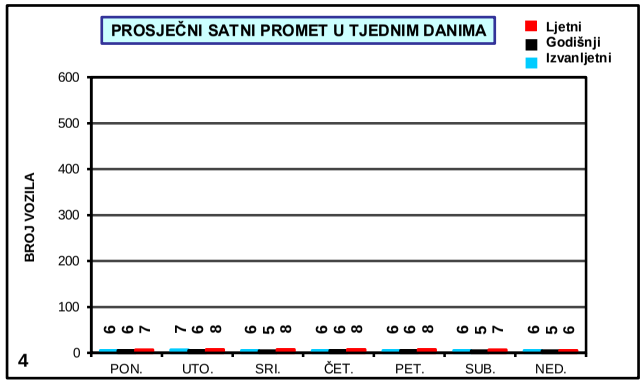

Napomene:

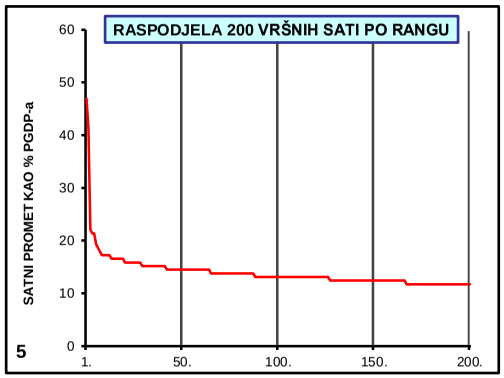

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

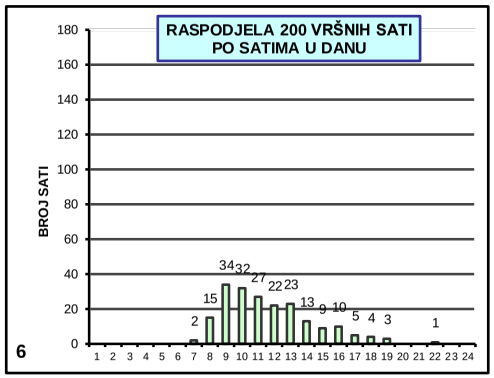

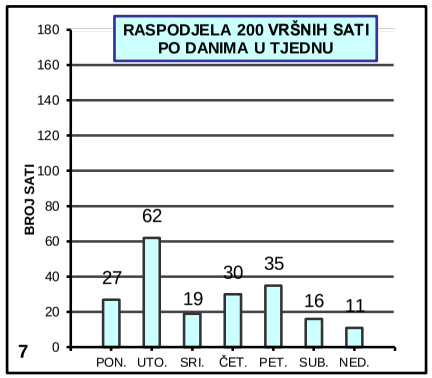

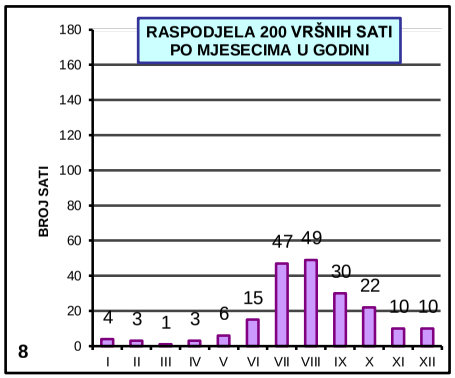

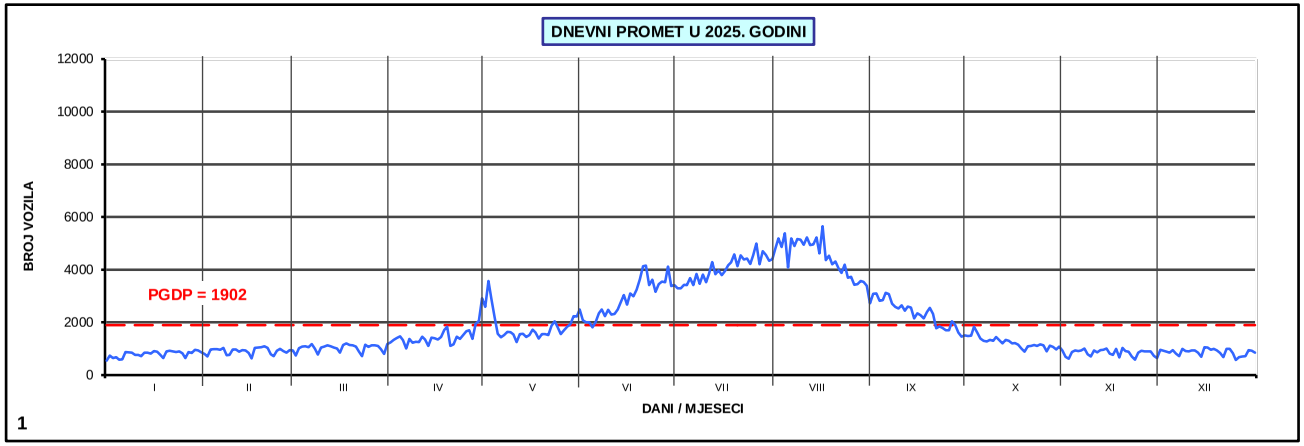

AB 5201, Biograd

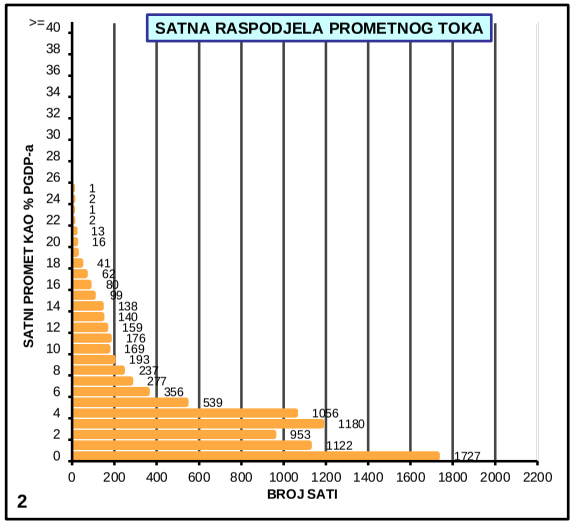

Godina: 2025.

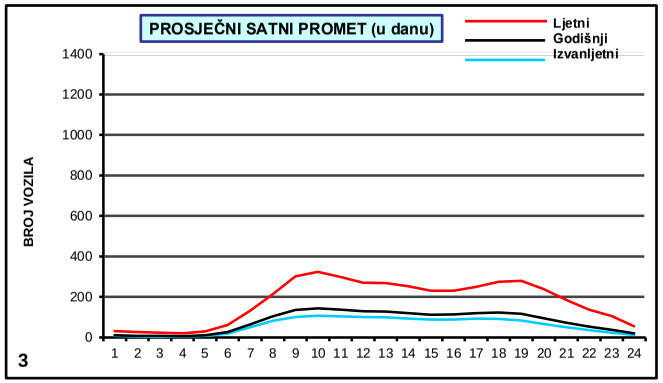

Broj ceste: L 63176

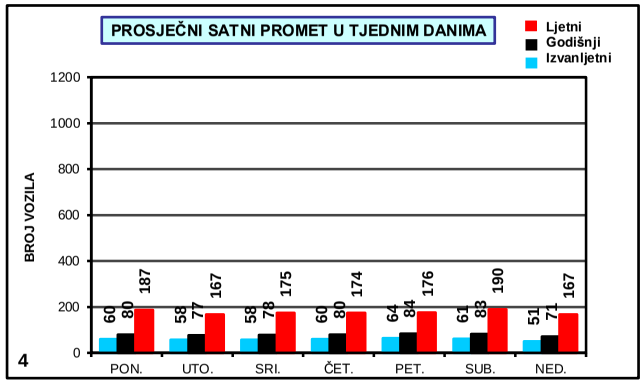

Napomene:

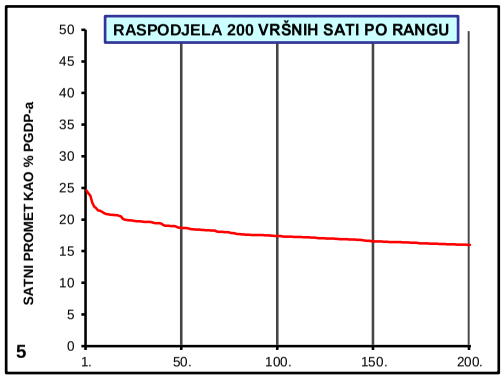

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

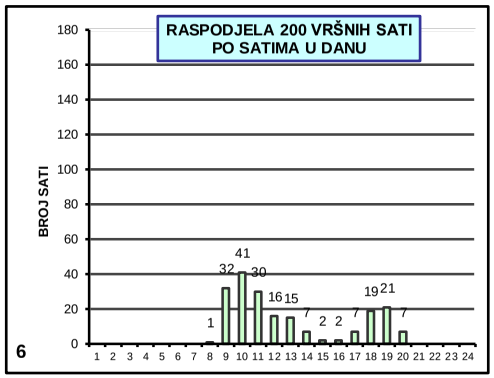

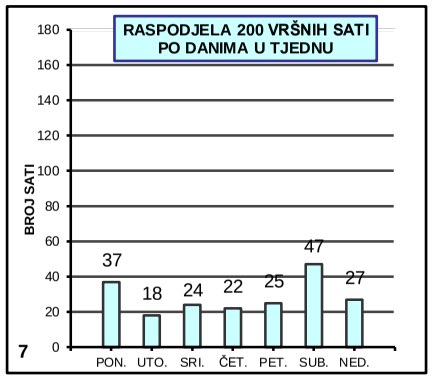

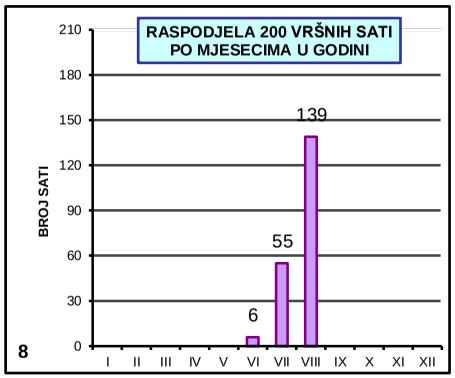

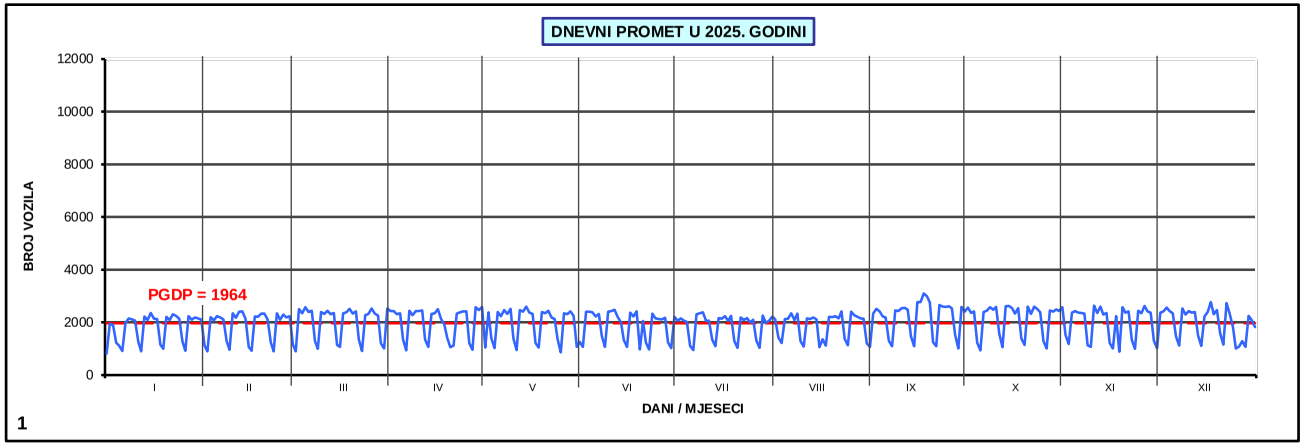

AB 5009, Knin

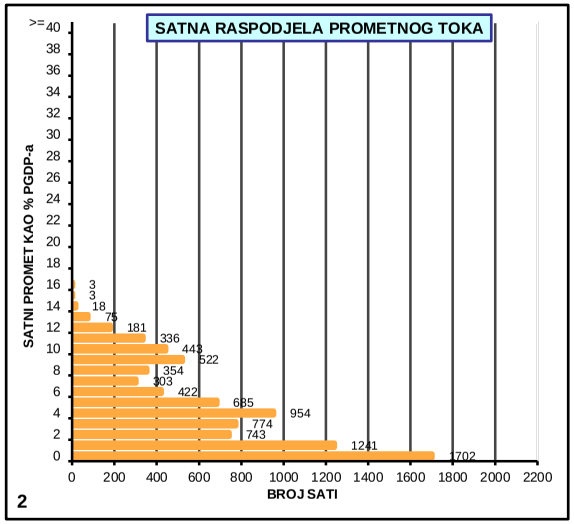

Godina: 2025.

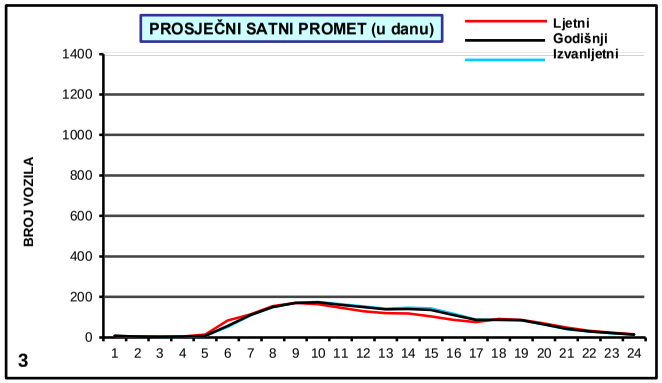

Broj ceste: L 65011

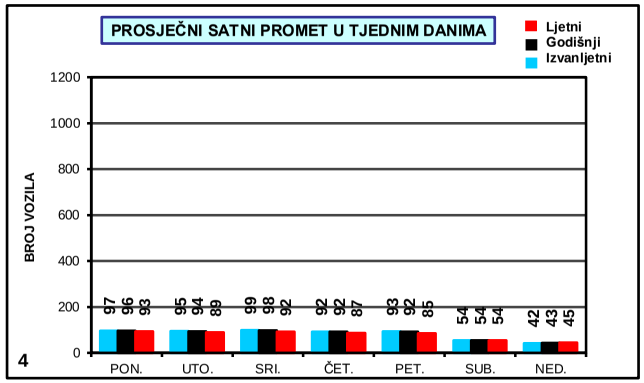

Napomene:

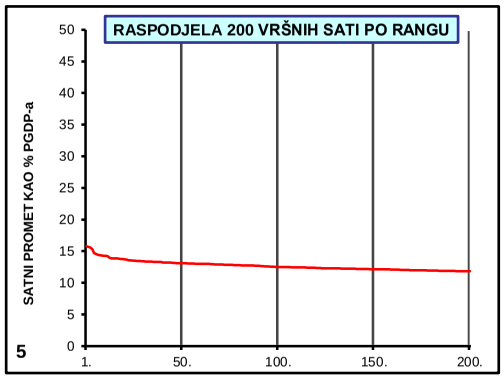

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

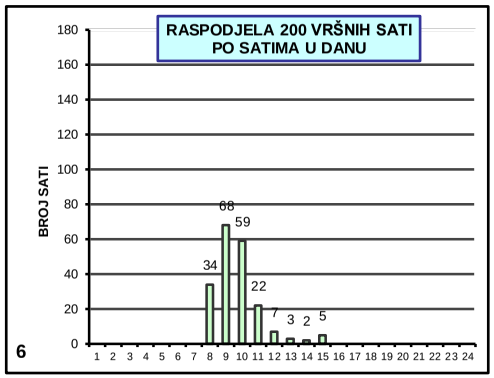

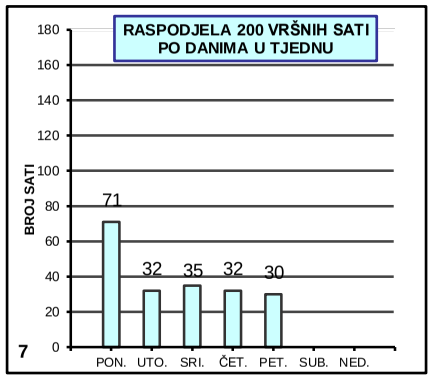

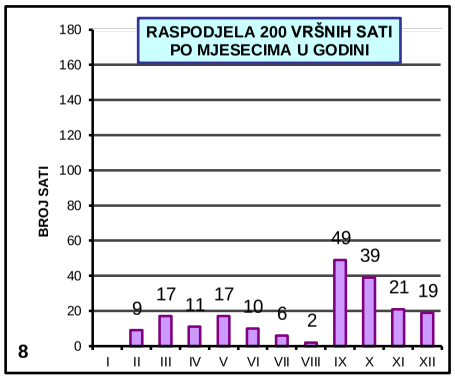

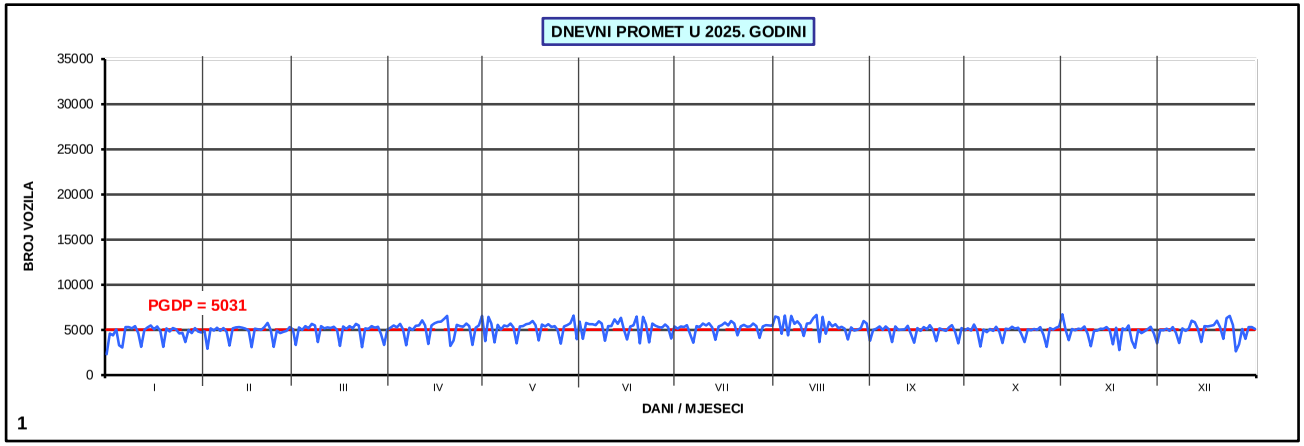

AB 5429, Drniš - istok

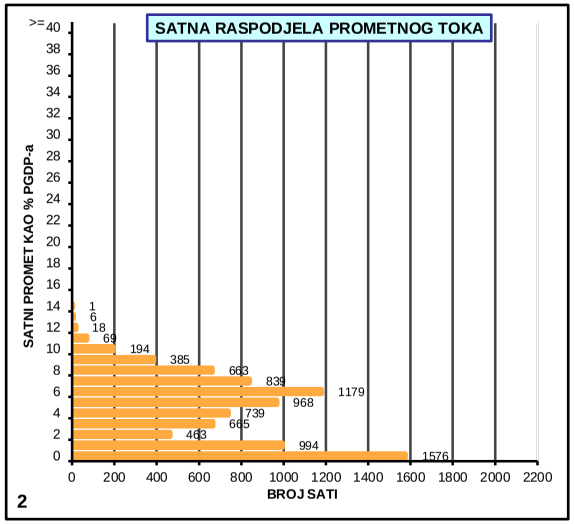

Godina: 2025.

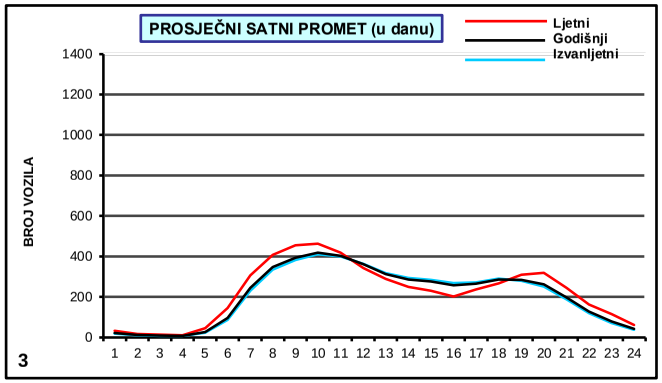

Broj ceste: L 65050

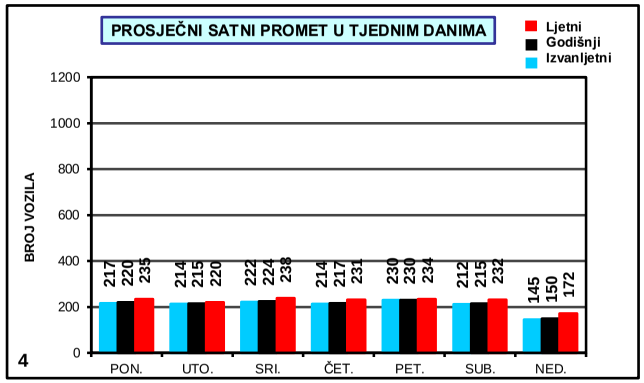

Napomene:

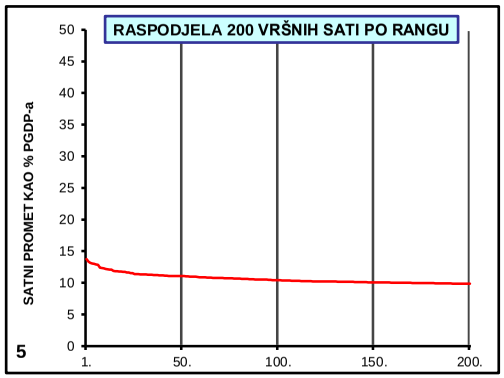

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

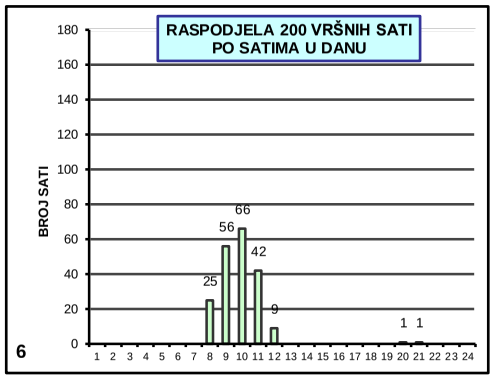

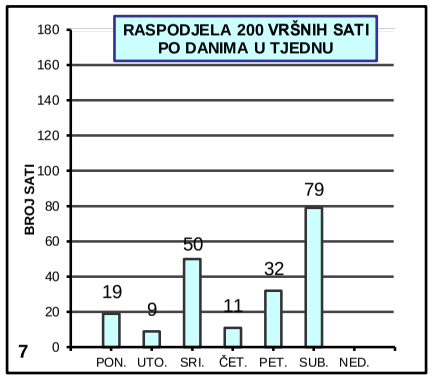

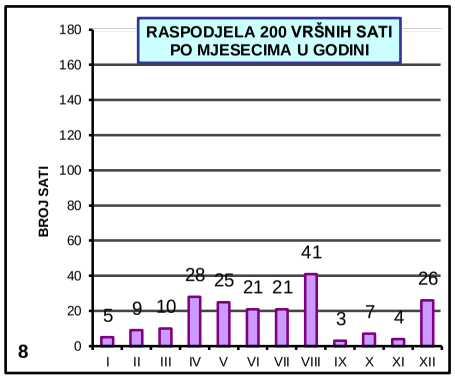

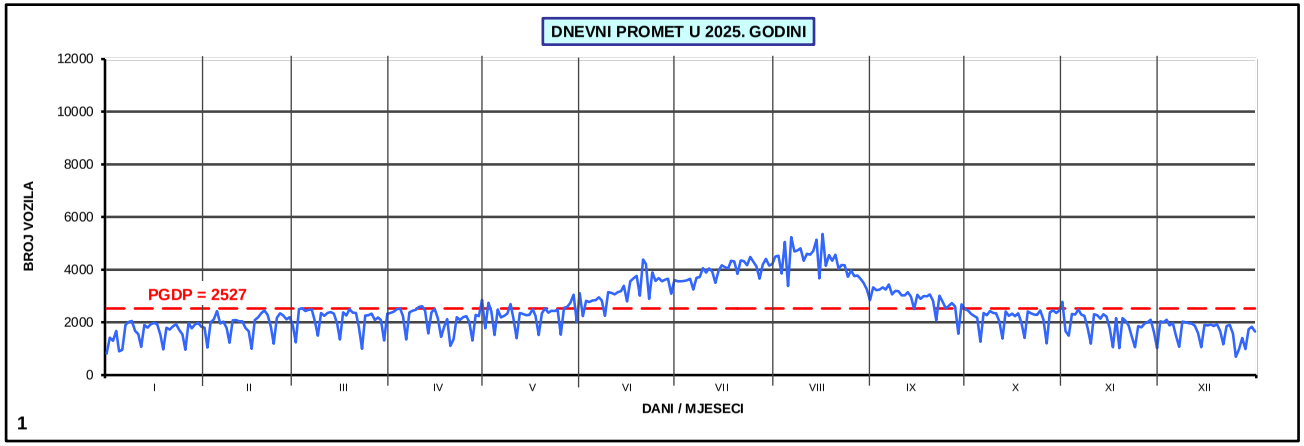

AB 5334, Primošten

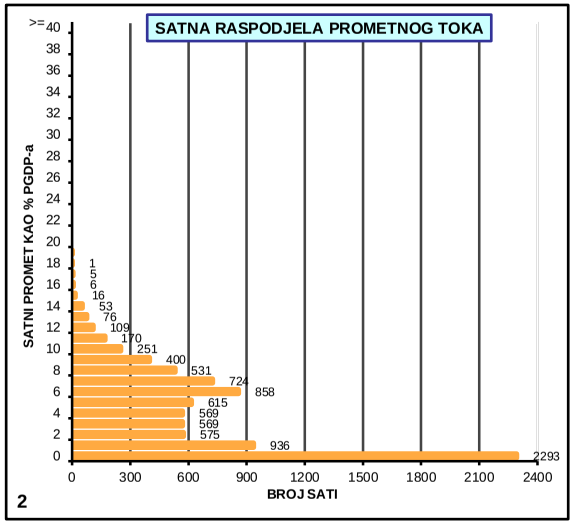

Godina: 2025.

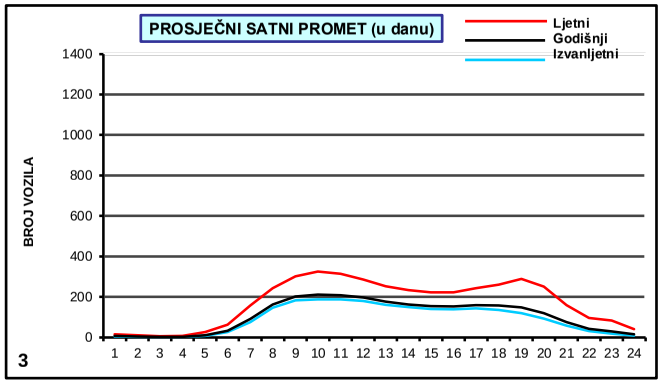

Broj ceste: L 65075

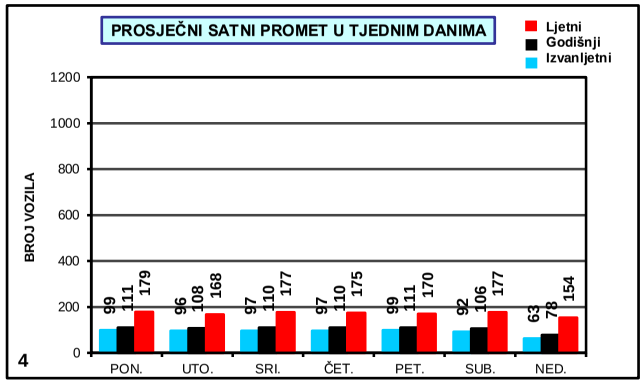

Napomene:

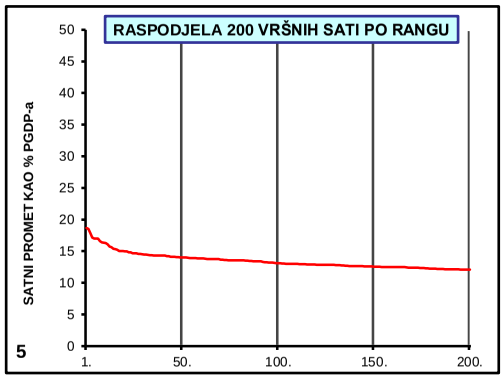

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

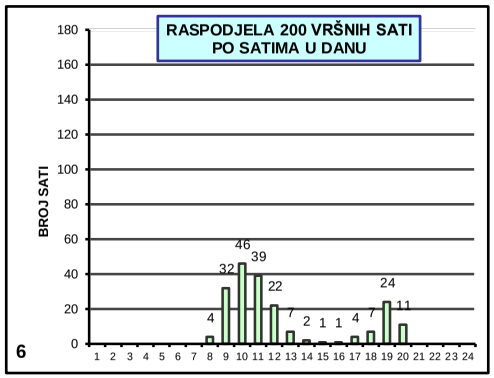

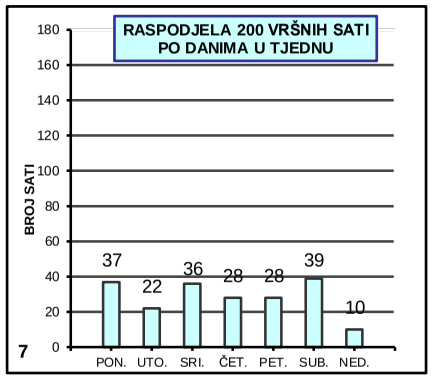

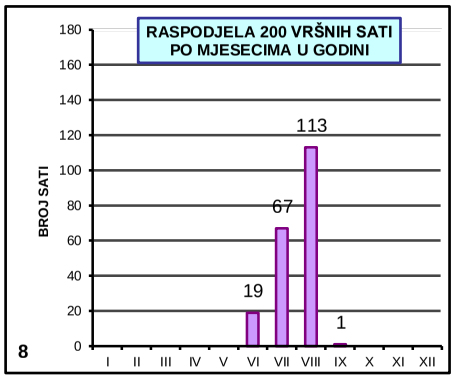

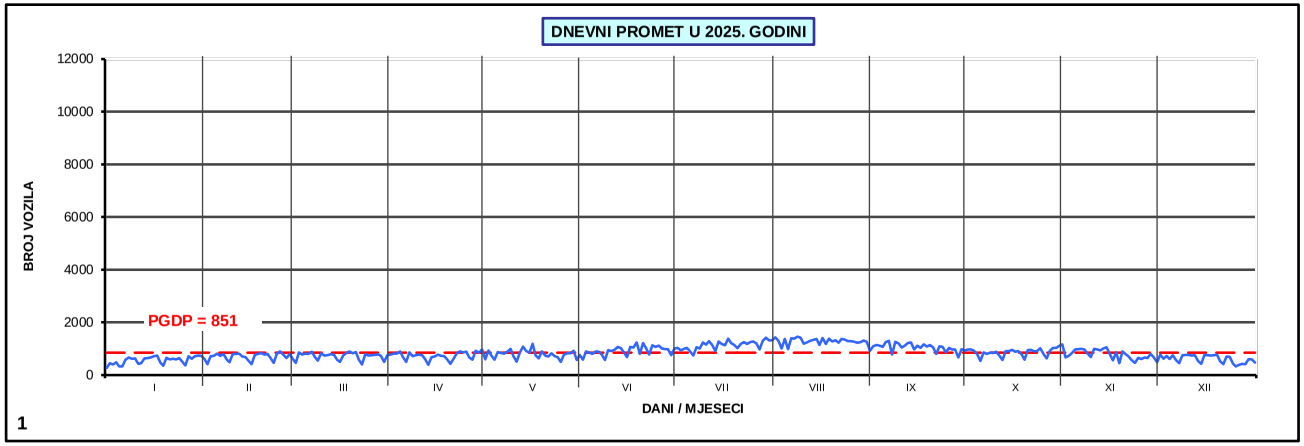

AB 5331, Draga

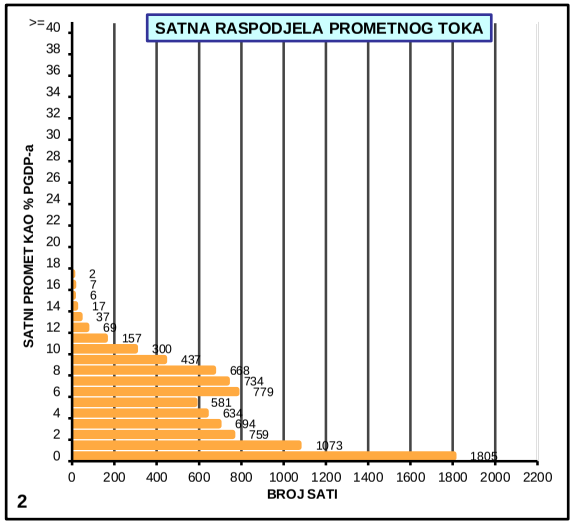

Godina: 2025.

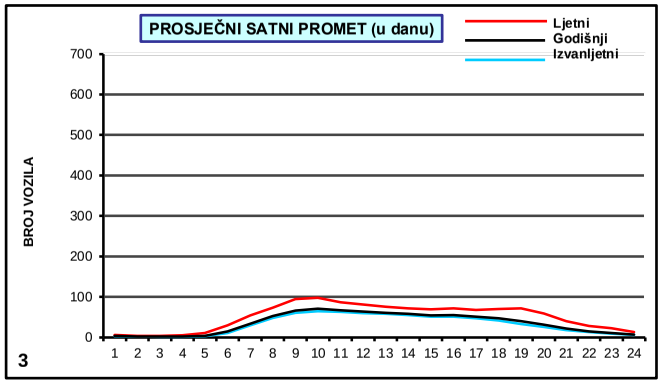

Broj ceste: L 65076

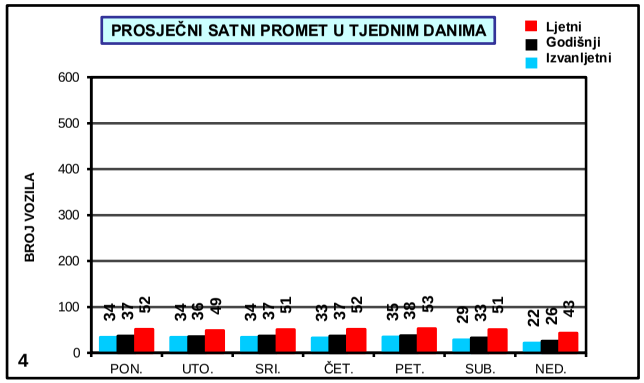

Napomene:

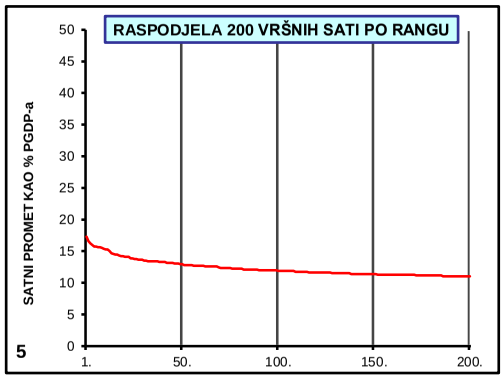

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*
- *Grafikoni sadrže samo stvarno prikupljene podatke*

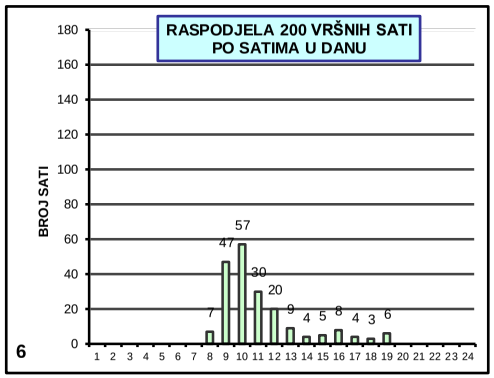

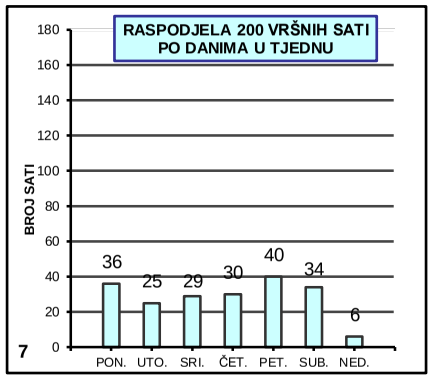

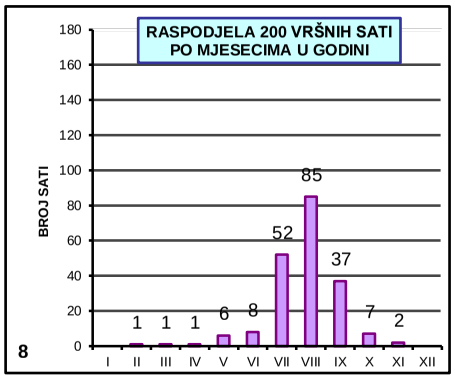

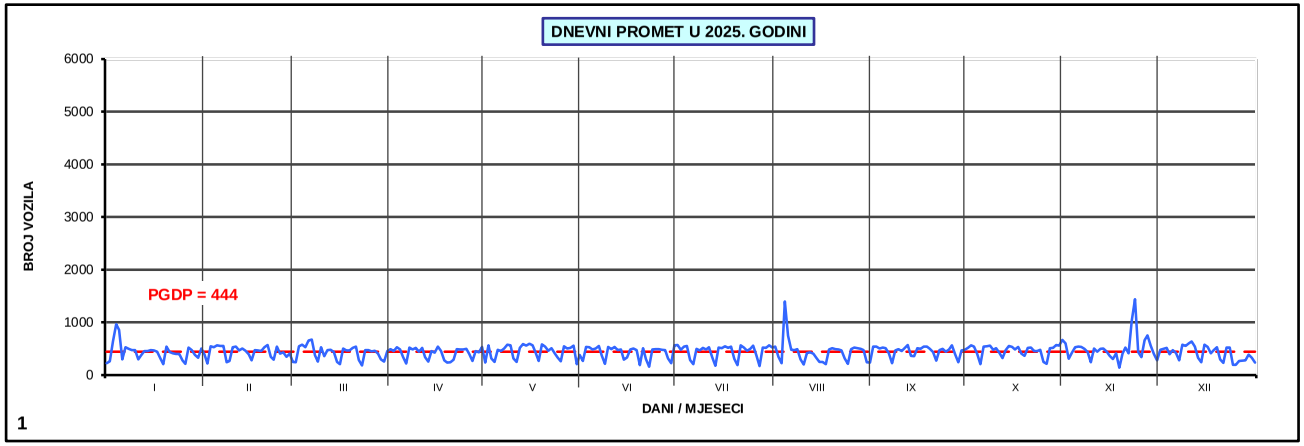

AB 5530, Zelovo

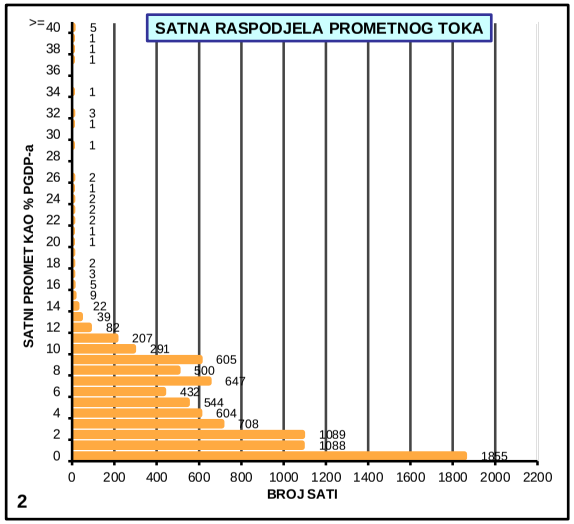

Godina: 2025.

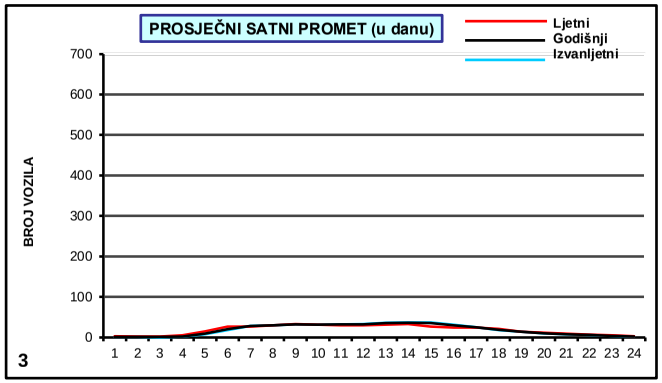

Broj ceste: L 67029

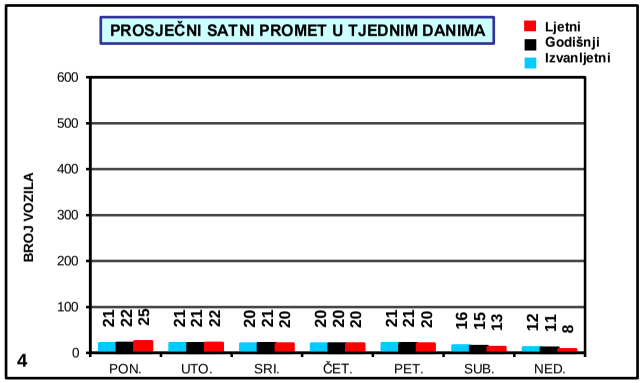

Napomene:

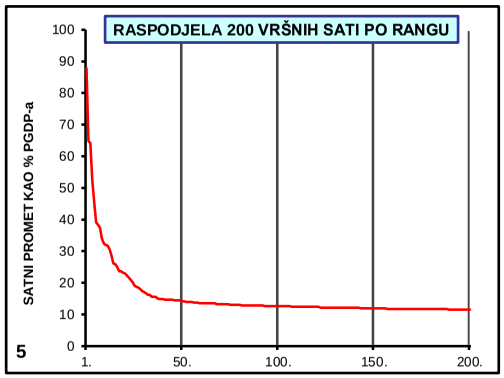

- *Ljetni promet: VII i VIII mjesec*
- *Izvanljetni promet: od I do VI i od IX do XII mjeseca*

PRILOZI 8

Kratice i značenja
Common Abbreviations and Terms

Kartografski prikazi:

Razmještaj mjesta brojenja prometa (stanje 31. prosinca 2025.)

Prosječni godišnji dnevni promet na odabranim cestama u 2025. godini

Prosječni godišnji dnevni promet na državnim i županijskim cestama u 2024. godini

Prosječni godišnji dnevni promet na autocestama u 2025. godini

Prilog 8.1. Kratice i značenja
Appendix 8.1. Common Abbreviations and Terms

Kratica	Značenje	Abbreviation	Meaning
	BROJENJE PROMETA NA CESTAMA REPUBLIKE HRVATSKE		**TRAFFIC COUNTING ON THE ROADWAYS OF CROATIA**
PGDP	prosječan godišnji dnevni promet	**AADT**	Average Annual Daily Traffic
PLDP	prosječan ljetni dnevni promet	**ASDT**	Average Summer Daily Traffic
PDP	prosječan dnevni promet	**ADT**	Average Daily Traffic
	procjena		estimate
DC	državna cesta	**SR**	State Road
ŽC	županijska cesta	**CR**	County Road
AC	autocesta	**M**	Motorway
PAC	poluautocesta	**SM**	Semi – Motorway
LC	lokalna cesta	**LR**	Local Road
ner.	nerazvrstana cesta	**unclas.**	unclassified road
NAB	neprekidno automatsko brojenje prometa	**ACC**	Automatic Count (continuous)
PAB	povremeno automatsko brojenje prometa	**ACP**	Automatic Count (periodical)
NB	naplatno brojenje	**TCTS**	Traffic Census at Toll Stations
NP	naplatna postaja	**TS**	Toll Station
po, ut, sr	ponedjeljak, utorak, srijeda		Monday, Tuesday, Wednesday
če, pe, su, ne	četvrtak, petak, subota, nedjelja		Thursday, Friday, Saturday, Sunday
čv.	čvorište		intersection
GP	granični prijelaz		border crossing
G.A.P	granice administrativnog područja		boundaries of administrative area
TP	trajektno pristanište		ferry port
	ručno brojenje prometa		manual count
	broj / oznaka ceste		road reference number / designation
	brojačko mjesto		counting site
	način brojanja		method of count
	duljina odsječka		section length

Prilog 8.1. Kratice i značenja /nastavak/
Appendix 8.1. Abbreviations and Terms /cont./

Kratica	Značenje	Abbreviation	Meaning
	ukupno		total
	sveukupno		overall total
	udjel		share
	prosječni satni promet		average hourly traffic
	vršni sat		peek hour
	dan		day
	tjedan		week
	mjesec		month
	godina		year
	ulazna naplatna postaja		entrance toll station
	izlazna naplatna postaja		exit toll station
	most		bridge
	tunel		tunnel
	cestovne građevine s naplatom prometa		toll road constructions
	motorna vozila		motorized vehicles
	vrsta vozila		vehicle type
	skupina vozila		vehicle class
	razred duljine		length class
	struktura prometa		traffic composition
	bicikli		bicycles
	mopedi		mopeds
	motocikli		motorcycles
	osobna vozila		passenger cars
	teretna vozila		goods vehicles
	autobusi		buses
	teretna vozila s prikolicom		combination trucks
	tegljači (s prikolicom)		truck-tractors (with trailers)

Prilog 8.1. Kratice i značenja /nastavak/
Appendix 8.1. Abbreviations and Terms /cont./

Kratica	Značenje	Abbreviation	Meaning
	traktori i radna vozila		tractors and industrial vehicles
	zaprežna vozila		horse-drawn vehicles
	motorni tricikli		motorized tricycles
	motorni četverocikli		motorized quadricycles
	priključno vozilo		auxiliary vehicle
	ostala vozila		other vehicles
	prometni tok		traffic flow
	osovina		axle
